Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Whitehead,S.

Direct Submission

Submitted (04-APR-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquerry@sanger.ac.uk Clone requests: clonerequests@sanger.ac.uk On Apr 7, 2002 this sequence version replaced gi:17127811. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C.elegans/wormpep RP23-418011 is from the RPI-23 Mouse PAC Library constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm VECTOR: pBACE3.6.

-----

\* NOTE: This record contains 63 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

Center Clone name: RP11-437M11 (bc0424)  
----- Summary Statistics  
Sequencing vector: unknown; 33% of reads  
Chemistry: Dye-terminator ET; 76% of reads  
Chemistry: Dye-terminator Big Dye; 24% of reads  
Assembly program: Phrap; version 0.990319  
Consensus quality: 139214 bases at least Q40  
Consensus quality: 139263 bases at least Q30  
Insert size: 139280; sum-of-contigs  
Quality coverage: 13.0x in Q20 bases; sum-of-contigs  
-----  
Overlapping Sequences:  
5': RP11-219121 (UWGC:bc0309) AC092047, 130783-bp overlap  
3': RP4-613B23 AC006059, 101219-bp clone overlap, of which  
37845 bp is included in this submission  
-----  
Sequence Quality Assessment:  
This entry has been annotated with sequence quality  
estimates computed by the Phrap assembly program.  
All manually edited bases have been reduced to quality zero.  
Quality levels above 40 are expected to have less than  
1 error in 10,000 bp.  
Base-by-base quality values are not generally visible from the  
GenBank flat file format but are available as part  
of this entry's ASN.1 file.  
-----  
This sequence was finished as follows unless otherwise noted:  
all regions were either double-stranded or sequenced with an  
alternate chemistry or covered by high quality data (i.e., phred  
quality >= 30); an attempt was made to resolve all sequencing  
problems, such as compressions and repeats; all regions were  
covered by at least one plasmid subclone or more than one M13  
subclone; and the assembly was confirmed by restriction digest.  
-----  
Sequence Validation:  
This sequence has been validated by Multiple Complete Digest  
fingerprinting. Comparison of the experimentally derived digest  
fragments with sequence-predicted fragments is given below.  
The electronically-digested sequence consists of both insert and  
vector, in order to accurately represent the entire circular BAC.  
Small fragments below a variable cutoff (approximately 400-800 bp)  
are not resolved in the fingerprint and hence do not appear  
in the table. There are no significant remaining discrepancies  
between the experimental and predicted values. Uniquely ordered  
fragments are separated by dashed lines.

----- Project Information
Center project name: csk
Center clone name: 161K02

This sequence was finished as follows unless otherwise noted:
all regions were double-stranded, sequenced with an
alternate chemistry, or covered by high quality data
(i.e., phred quality >= 30); an attempt was made to resolve
all sequencing problems, such as compressions and repeats;
all regions were covered by at least one plasmid subclone
or more than one M13 subclone; and the assembly was confirmed
by restriction digest.

CLONE LENGTH: This sequence represents the entire insert of
this clone unless otherwise noted. If there are overlapping
clones, the overlaps are noted in the beginning and end of
the features section.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

## MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see <http://www.nhgri.nih.gov/DIR/GRB/CHR7>, send mailto:egreen@nhgri.nih.gov, or see <http://genome.wustl.edu>

## SOURCE INFORMATION:

This clone was derived from human PAC library RPCI-5, prepared by Pieter de Jong and coworkers at <http://www.chori.org> using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994). The library is from one male donor.  
The clone may be obtained either from Genome Systems, Inc. (<http://www.genomesystems.com>) or Research Genetics, Inc. (<http://www.resgen.com>); or from Pieter de Jong.  
VECTOR: pCYPAC2

## NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the right is CTA-325M7, 200 bp overlap.  
Actual start of this clone is at base position 1 of RP5-964C11.  
Actual end is at 150025 of RP5-964C11.

 Center project name: esd  
 Center clone name: 288H14

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics  
 Sequencing vector: plasmid; n/a; 100% of reads  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.990319  
 Consensus quality: 162199 bases at least Q40  
 Consensus quality: 162591 bases at least Q30  
 Consensus quality: 162777 bases at least Q20  
 Insert size: 149000; agarose-fp  
 Insert size: 162873; sum-of-contigs  
 Quality coverage: 10.65x in Q20 bases; agarose-fp  
 Quality coverage: 9.74x in Q20 bases; sum-of-contigs

-----  
 \* NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.  
 \* This sequence will be replaced  
 \* by the finished sequence as soon as it is available and  
 \* the accession number will be preserved.

NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA
was isolated from white blood cells obtained from a male chimpanzee
(Pan troglodytes, 'Cint', Verkes #C0471; birthdate: 6-6-80). The
clone and detailed information can be obtained from Resgen
(http://www.resgen.com) or Pieter de Jong and co-workers at
http://www.bacpac.chori.org.

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

-----
Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
GenBank flat file format but are available as part
of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:
all regions were either double-stranded or sequenced with an
alternate chemistry or covered by high quality data (i.e., Phred
quality >= 30); an attempt was made to resolve all sequencing
problems, such as compressions and repeats; all regions were
covered by at least one plasmid subclone or more than one M13
subclone; and the assembly was confirmed by restriction digest.

```

## Sequence Validation:

This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

-----

CLONE LENGTH: This sequence does not necessarily represent the

entire insert of this clone. Overlapping regions of clones are only

sequenced and submitted once, so the sequence for the remainder of

the insert may be found in the record for the adjacent clones.

Overlapping clones are noted at the beginning and end of the

Features listing.

-----

ANNOTATION OF FEATURES:

STSS are identified using ePCR (Genome Res. 7:541-550) searches

of a local database that includes entries from dbSTS, GDB, and

local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green,

unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST

(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the

EST and cDNA sequences. Genes demonstrate at least two exons

flanked by consensus splice sites that maintained sequence

continuity across the splice junctions. Sequences that are not

identical matches are annotated as similar.

-----

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum

standard of double strand coverage with a minimum of 2 clones and 2

reads with no ambiguities or 2 chemistries with a minimum of 2

clones and 3 reads with no ambiguities. If the sequence quality for

a region does not meet this standard, it will be indicated in the

annotation as Low Coverage.

-----

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality

standards - estimated error rate less than 1 per 10,000 bases.

Reports of lowest quality individual bases and measures of base

quality are listed below. Description of the metrics can be found

at URL:

http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

The sequence data in this record represents an 'enhanced'  
 version of a Phase 2 submission. Specifically, the indicated  
 order and orientation of each sequence contig has been  
 established using one or more of the following: read-pair  
 data from individual subclones, overlaps with neighboring  
 clones, alignment with available reference sequence (e.g.,  
 human), and/or confirmation by PCR testing. In addition,  
 the sequence assembly is based on at least 8X average  
 coverage in Q20 bases and has been reviewed to rule out  
 gross misassemblies, the low-quality ends of sequence  
 contigs have been trimmed away, and each base is associated  
 with a Phrap-derived quality score.

#### ----- Summary Statistics -----

Sequencing vector: plasmid; n/a; 100% of reads  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.990319  
 Consensus quality: 18653 bases at least Q40  
 Consensus quality: 186859 bases at least Q30  
 Consensus quality: 187025 bases at least Q20  
 Insert size: 154000; agarose-fp  
 Insert size: 187130; sum-of-contigs  
 Quality coverage: 11.97x in Q20 bases; agarose-fp  
 Quality coverage: 9.85x in Q20 bases; sum-of-contigs

\* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 5 contigs. Gaps between the contigs  
 \* are represented as runs of N. The order of the pieces  
 \* is believed to be correct as given, however the sizes  
 \* of the gaps between them are based on estimates that have  
 \* been provided by the submittor.

\* This sequence will be replaced  
 \* by the finished sequence as soon as it is available and  
 \* the accession number will be preserved.

\* 1 5374: contig of 5374 bp in length  
 \* 5375 5474: gap of unknown length  
 \* 5475 57679: contig of 5205 bp in length  
 \* 57680 57779: gap of unknown length  
 \* 57780 99879: contig of 42100 bp in length  
 \* 99880 99979: gap of unknown length  
 \* 99980 121286: contig of 21307 bp in length  
 \* 121287 121386: gap of unknown length  
 \* 121387 187530: contig of 66144 bp in length.

Primer A: No sequence submitted  
Primer B: No sequence submitted  
STS size: 942

Protocol:  
23,021,928 chimpanzee whole genome shotgun reads were aligned to  
the Human genome NCBI  
Build 34 (hg16, July 2003). Chimp WGS reads were from 9 donors,  
including Clint (Pan  
troglodytes verus), 3 other Pan troglodytes verus chimps  
(Donald, Karlén, Yvonne), 3 Pan  
troglodytes troglodytes chimps (Noemie, Masuku, Clara) and 2 chimps  
of unknown origin  
(Gon Unknown Chimp). Common names: Pan troglodytes verus is the  
western chimp and Pan  
troglodytes troglodytes is the central chimp. To be included in  
chimpanzee SNP discovery, a  
read must be at least 500bp in length, at least 50% of its base  
calls must have Phred  
score >= 20, at least 30% of its base calls must satisfy  
SNQS(30,25) (single strand NQS, the  
base in question has Phred score >= 30, the surrounding 10 bases in  
the read have Phred  
score >= 25), and the read must have at least 200 bp SNQS(30,25)  
bases. Reads not uniquely  
placed in the genome and read pairs whose two ends were not  
consistently placed were  
discarded. After above filtering, NQS(30,25) standard was applied  
to all pairs of  
overlapping reads to call NQS bases and SNPs. Alignments (between  
two reads) with less  
than 100 NQS bases or with SNP rate > 0.01 were discarded. To

exclude alignment between two  
copies of a single read, comparisons between two reads that share  
95% of their genome  
alignments (>=95% bases of read A and >=95% bases of read B were  
placed at the same locus  
of human genome) were discarded.

This sequence was finished as follows unless otherwise noted: all chemistry were either double-stranded or sequenced with an alternate 30'; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.  
 W12-801302G5 is from a Whitehead human fosmid library VECTOR: pEpifos-5 Eco721.

-----

\* NOTE: This record contains 57 individual  
 \* sequencing reads that have not been assembled into  
 \* contigs. Runs of N are used to separate the reads  
 \* and the order in which they appear is completely  
 \* arbitrary. Low-pass sequence sampling is useful for  
 \* identifying clones that may be gene-rich and allows  
 \* overlap relationships among clones to be deduced.  
 \* However, it should not be assumed that this clone  
 \* will be sequenced to completion. In the event that  
 \* the record is updated, the accession number will  
 \* be preserved.

\* 1 699: contig of 699 bp in length

Almeida, J.  
Direct Submission  
Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,  
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk  
Clone requests: clonerequest@sanger.ac.uk  
On Nov 16, 2001 this sequence version replaced gi:15722103.  
The following abbreviations are used to associate primary accession  
numbers given in the feature table with their source databases:  
Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information  
http://www.sanger.ac.uk/Projects/C\_elegans/wormpep This sequence  
was generated from part of bacterial clone contigs of human  
chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping  
Group. Further information can be found at  
http://www.sanger.ac.uk/HGP/Chr1  
Rp11-540K16 is from the library RPC1-11.2 constructed by the group  
of Pieter de Jong. For further details see  
http://www.chori.org/bacpac/home.htm

-----  
This sequence was finished as follows unless otherwise noted: all  
regions were either double-stranded or sequenced with an alternate  
chemistry or covered by high quality data (i.e., phred quality >=  
30); an attempt was made to resolve all sequencing problems, such

## NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-357L18, 2000 bp overlap;  
the clone sequenced to the right is RP11-568024, 2000 bp overlap.  
Actual start of this clone is at base position 9509 of RP11-357L18;  
actual end is at base position 77842 of RP11-568024.

* NOTE: This record contains 79 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

DEFINITION Homo sapiens chromosome 3 clone Rp11-421F9, complete sequence.

http://www.sanger.ac.uk/Projects/C\_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6  
Rp11-57L9 is from the library RPI1-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

-----  
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

JOURNAL	Submitted (13-MAY-1999) Masahira Hattori, The Institute of Physical and Chemical Research (RIKEN), Genomic Sciences Center (GSC), Kitasato Univ., 1-15-1 Kitasato, Sagamihara, Kanagawa, 228-8555, Japan [E-mail:hattori@gsc.riken.go.jp, URL:http://hgp.gsc.riken.go.jp/, Tel:81-42-778-9923, Fax:81-42-778-9924]			
COMMENT	On Aug 5, 2005 this sequence version replaced gi:6016885. The sequence is a part of the data (ACCESSION No. AP000174 - AP000194). The sequencing project is supported by Japan Science Technology Corporation (JST) and The Institute of Physical and Chemical Research (RIKEN). Evidence from one overlapping clone (RP11-630H12), four mRNAs (BC069689, BC069709, BC069766, BC069779) and four ESTs (H11586, BX101811, AI888342, BX419841) indicate that there was an A missing from the chromosome 21 consensus sequence at position 29630 in this clone. We confirmed that this clone sequence was correct as previously submitted by reviewing the original trace data, but since all other evidence suggests that the base is truly missing we have inserted an additional base in this submission.

TITLE	Direct Submission
JOURNAL	Submitted (31-JAN-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT	<p>On Jan 31, 2002 this sequence version replaced gi:17223113.</p> <p>INFORMATION: <a href="http://www.hgsc.bcm.tmc.edu/">http://www.hgsc.bcm.tmc.edu/</a> or email <a href="mailto:gc-help@bcm.tmc.edu">gc-help@bcm.tmc.edu</a></p> <p>CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of</p>

the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: <http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

HSDJ336M4/c 76241 bp DNA linear PRI 02-DEC-2004
LOCUS HSDJ336M4
DEFINITION Human DNA sequence from clone RP3-336M4 on chromosome 1p36.11-36.2
Contains the 5' UTR of the gene Miz-1, pseudogenes similar to part
of Carboxypeptidase D, fire oncogene and fire-2 oncogene (USP6), a
putative novel gene and the 3' end of the gene for a cardiovascular
heat shock protein. Contains ESTs, STSs, GSSs and two putative CpG
islands, complete sequence.

Direct Submission
Submitted (05-JUN-2003) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Apr 9, 2000 this sequence version replaced gi:6002162.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em, EMBL; Sw, SWISSPROT; Tr, TrEMBL; Wp, WormPep; Information
on the WormPep database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chri
----- Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: humquery@sanger.ac.uk
-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.
RP3-336M4 is from the library RPCI-3 constructed by the group of
Pieter de Jong. For further details see
http://www.chori.org/bacpac/home.htm
VECTOR: pCYPAC2
IMPORTANT: This sequence is not the entire insert of clone
RP3-336M4. It may be shorter because we sequence overlapping
sections only once, except for a short overlap.
The true right end of clone RP3-336M4 is at 76241 in this sequence.
The true right end of clone RP1-134019 is at 100 in this sequence.

chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

#### MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

#### SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osogawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries for genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org> VECTOR: pBACE3.6

#### NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-169113; the clone sequenced to the right is RP11-212J19, 2000 bp overlap. Actual start of this clone is at base position 1 of RP11-308G12; actual end is at base position 80717 of RP11-212J19.

Data from AC010823 and AC084013 was used to finish this clone, AC012356. Polymorphisms have been identified between AC010823, AC084013, and AC012356.

----- Summary Statistics  
Sequencing vector: M13; M77815; 97% of reads  
Sequencing vector: Plasmid; n/a; 3% of reads  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.960731  
Consensus quality: 101354 bases at least Q40

Consensus quality: 109133 bases at least Q30  
Consensus quality: 111925 bases at least Q20  
Insert size: 121000; agarose-fp  
Insert size: 113209; sum-of-contigs  
Quality coverage: 5.0 in Q20 bases; agarose-fp  
Quality coverage: 5.3 in Q20 b.  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 28 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.  
\* 1 632: contig of 632 bp in length  
\* 633 732: gap of 100 bp

XX (HUMA-) HUMAN GENOME SCI INC.
XX Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-483426/52.
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX Disclosure; SEQ ID NO 29188; 3071pp + Sequence Listing; English.
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

PT Array containing probes for genes involved in mitochondrial biology,  
 PT useful for determining mitochondrial biology gene expression profiles for  
 PT use in diagnosing pathologies and identifying biochemical pathways.

XX Claim 2; SEQ ID NO 2781; 201pp; English.

XX The invention relates to a novel array comprising at least two isolated  
 CC nucleotide molecules, each molecule having a sequence capable of uniquely  
 CC hybridising to a nucleic acid molecule which is an expression product of  
 CC a gene involved in mitochondrial biology. The array comprises two or more  
 CC isolated nucleic acid molecules or spots, each molecule having a sequence  
 CC chosen from sequence of 994 human probes and 2046 mouse probes. An array  
 CC of the invention is useful for determining an expression profile of a  
 CC mouse or human sample containing nucleic acid, by contacting the array  
 CC with the sample under conditions allowing selective hybridisation, and  
 CC measuring hybridisation of nucleic acid in the sample to the array to  
 CC produce an expression profile. The array is also useful for determining  
 CC an expression profile of a first labelled sample containing nucleic acid  
 CC relative to a second, differently labelled sample containing nucleic  
 CC acid. The second sample is a reference or a standard. An array is useful  
 CC for determining an expression profile diagnostic of an energy-metabolism-  
 CC related physiological condition. An array of the invention is useful for  
 CC determining mitochondrial biology gene expression profiles of organisms,  
 CC such as human, mice and closely related species, tissue and organs of  
 CC such organisms, which are useful for determining expression profiles  
 CC diagnostic of energy metabolism-related physiological conditions.  
 CC diagnosing such physiological conditions, identifying biochemical  
 CC pathways, genes, and mutations involved in such physiological conditions,  
 CC identifying therapeutic agents useful for preventing and/or treating such  
 CC physiological conditions, evaluating and/or monitoring the efficacy of  
 CC such therapies, and creating and identifying animal models of human  
 CC energy metabolism-related physiological conditions. An array is also  
 CC useful for defining expression signatures or profiles for mitochondrial  
 CC diseases, as well as distinguishing clinical disorders that result from  
 CC oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,  
 CC apoptosis and aging. An array of the invention contains probes of genes  
 CC not previously recognised to participate in mitochondrial biology. The  
 CC sequences shown in ADP33224-ADP35260 represent murine mitochondrial DNA  
 CC clones used to make the probes of the invention. Some sequences are not  
 CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,  
 CC 1906, 2408 and 2643.

XX Polypeptide-human protein-13.2 containing site specific recombinase

PT characteristic sequence fragment and polynucleotide for coding it.

PT Claim 6; SEQ ID NO 1; 32pp; Chinese.

XX The present invention relates to the isolation of human protein-13.2

CC containing a site-specific recombinase characteristic sequence fragment,

CC and the polynucleotide sequence encoding it. Also disclosed is a process

CC for preparing the polypeptide by a DNA recombination technique and

CC application of the polypeptide and polynucleotide in treating diseases

CC such as growth development disorders and tumours. The present sequence

CC encodes human protein-13.2.

PT them useful for treating, diagnosing, preventing Alzheimer's disease,  
PT Parkinson's disease, AIDS, rheumatoid arthritis, asthma.  
XX  
XX Claim 4; Page 469-470; 594pp; English.  
XX  
XX AAH19170-AAH19250 represent cDNAs corresponding to 27 human secreted  
CC protein genes, and AAG62156-AAG62235 represent the proteins they encode.  
CC AAG62236-AAG62293 represent human secreted protein fragments. The genes  
CC and their corresponding secreted proteins are useful for preventing,  
CC treating or ameliorating medical conditions, e.g., by protein or gene  
CC therapy. Pathological conditions can be diagnosed by determining the  
CC amount of the new protein in a sample or by determining the presence of  
CC mutations in the new genes. Specific uses are described for each of the  
CC 52 genes, based on the tissues in which they are most highly expressed,  
CC and include developing products for the diagnosis or treatment of  
CC proliferative disorders, cancer, tumours, foetal and developmental  
CC abnormalities, haematopoietic disorders, diseases of the immune system,  
CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation,  
CC allergies, neurological disorders (e.g., Alzheimer's disease,  
CC Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin  
CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis,  
CC cardiovascular disorders, angiotensin-related disorders, kidney disorders,  
CC gastrointestinal disorders, pregnancy-related disorders, endocrine  
CC disorders, and infections. The proteins can also be used to aid wound  
CC healing and epithelial cell proliferation, to prevent skin aging due to  
CC sunburn, to maintain organs before transplantation, for supporting cell  
CC culture of primary tissues, to regenerate tissues, to identify their  
CC cognate ligands or binding partners, and in chemotaxis, and can be used  
CC as a food additive or preservative to modify storage properties.  
CC Antibodies specific for a protein of the invention can be used in  
CC alleviating symptoms associated with the disorders mentioned above, and  
CC in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked  
CC immunosorbent assay (ELISA). The present sequence represents a human  
CC secreted protein-encoding cDNA of the invention

XX New hematological malignancy-related genes and polypeptides, useful for  
PT screening anti-cancer agents, and generating antibodies or  
PT immunoconjugates for treating e.g. multiple myeloma cell or chronic  
PT lymphocytic leukemia.  
XX  
XX Claim 1; SEQ ID NO 77; 307pp; English.  
XX  
XX The present invention describes an isolated polynucleotide (I), which is  
CC overexpressed in haematological malignancies, and which encodes a  
CC polypeptide or an immunogenic fragment of the polypeptide. Also  
CC described: (1) an isolated polypeptide; (2) an expression vector  
CC comprising (1) operably linked to an expression control sequence; (3) a  
CC host cell comprising an expression vector; (4) an isolated antibody that  
CC specifically binds to the polypeptide or its immunogenic fragment; and  
CC (5) immunoconjugates comprising the antibody above, or an antibody that  
CC specifically binds to a polypeptide, or its immunogenic fragment, encoded  
CC by (1). (I) has cytostatic and immunostimulant activities, and can be  
CC used in vaccines and immunotherapy. The immunoconjugates are useful in  
CC the manufacture of a medicament, particularly as active ingredients in a  
CC composition for treating cancer, e.g. multiple myeloma cell, chronic  
CC lymphocytic leukaemia, B cell leukaemias, or lymphomas in humans, sheep,  
CC primates, goats, bovines, equines, porcines, lupines, canines or felines.  
CC The polynucleotide (I) or polypeptide can be used for screening anti-  
CC cancer agents, and generating antibodies or immunoconjugates for treating  
CC or preventing the above-mentioned diseases. The polynucleotide,  
CC polypeptide or antibody can be used for detecting, diagnosing or  
CC prognosticating the haematological malignancies described above. The  
CC present sequence is used in the exemplification of the present invention.

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides.

PT useful for preventing, diagnosing and/or treating cancers and metastasis.

XX Disclosure, SEQ ID NO 24739; 3071pp + Sequence Listing; English.

XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)  
CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic  
CC activity, and can be used in gene therapy and vaccine production. (I)  
CC proteins and polynucleotides may be used in the prevention, diagnosis and  
CC treatment of diseases associated with inappropriate (I) expression. For  
CC example, they may be used to treat disorders associated with decreased  
CC expression by rectifying mutations or deletions in a patient's genome  
CC that affect the activity of (I) by expressing inactive proteins or to  
CC supplement the patients own production of (I). Additionally, (I)  
CC polynucleotides may be used to produce the secreted (I), by inserting the  
CC nucleic acids into a host cell and culturing the cell to express the  
CC protein. (I) proteins and polynucleotides may be used to prevent,  
CC diagnose and treat immune/haematopoietic-related diseases, especially  
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703  
CC to AAK87694 represent human immune/haematopoietic antigen genomic  
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169  
CC represent sequences used in the exemplification of the present invention

XX Morris DW;  
XX WPI; 2003-328604/31.  
XX Recombinant nucleic acid useful for diagnosis and treatment of carcinoma  
XX comprises a nucleotide sequence.  
XX Claim 1; SEQ ID NO 1864; Opp; English.  
XX The present invention relates to novel DNA and protein sequences which  
XX are associated with carcinomas. The sequences are useful for: (i) for  
XX screening drug candidates; (ii) for screening of bioactive agent capable  
XX of binding to Carcinoma Associated Protein (CAP); (iii) for screening of  
XX a bioactive agent capable of modulating the activity of CAP; (iv) for  
XX evaluating the effect of a candidate carcinoma drug; (v) for diagnosing  
XX carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating  
XX carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;  
XX (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for  
XX determining Carcinoma Associated (CA) gene copy number. In addition, the  
XX CA genes are useful as DNA vaccines and the CAP are useful as markers of  
XX carcinoma including lymphoma. The present sequence is one such CA coding  
XX sequence. Note: This patent is an equivalent to basic patent  
XX US2002182586A1, for which no sequence data was published

XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX PI Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
XX useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 34483; 307lpp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
XX amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
XX activity, and can be used in gene therapy and vaccine production. (I)
XX proteins and polynucleotides may be used in the prevention, diagnosis and
XX treatment of diseases associated with inappropriate (I) expression. For
XX example, they may be used to treat disorders associated with decreased
XX expression by rectifying mutations or deletions in a patient's genome
XX that affect the activity of (I) by expressing inactive proteins or to
XX supplement the patients own production of (I). Additionally, (I)
XX polynucleotides may be used to produce the secreted (I), by inserting the
XX nucleic acids into a host cell and culturing the cell to express the
XX protein. (I) proteins and polynucleotides may be used to prevent,
XX diagnose and treat immune/haematopoietic-related diseases, especially
XX cancers and cancer metastases of haematopoietic-derived cells. AAK64703
XX to AAK87694 represent human immune/haematopoietic antigen genomic
XX sequences from the present invention. AAK54942 to AAK54950 and AAM82169
XX represent sequences used in the exemplification of the present invention

PS  
XX  
XX The present invention provides the protein and coding sequences of a  
CC number of human reproductive system related antigens. These can be used  
CC in the prevention and treatment of reproductive system disorders,  
CC including cancer. The present sequence is a genomic sequence encoding a  
CC protein of the invention

 DR  
 XX  
 XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,  
 PT useful for preventing, diagnosing and/or treating cancers and metastasis.  
 PT  
 XX Disclosure; SEQ ID NO 38570; 3071pp + Sequence Listing; English.  
 PS  
 XX  
 XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)  
 CC amino acid sequences given in AAK91921. (I) have cytostatic  
 CC activity, and can be used in gene therapy and vaccine production. (I)  
 CC proteins and polynucleotides may be used in the prevention, diagnosis and  
 CC treatment of diseases associated with inappropriate (I) expression. For  
 CC example, they may be used to treat disorders associated with decreased  
 CC expression by rectifying mutations or deletions in a patient's genome  
 CC that affect the activity of (I) by expressing inactive proteins or to  
 CC supplement the patients own production of (I). Additionally, (I)  
 CC polynucleotides may be used to produce the secreted (I), by inserting the  
 CC nucleic acids into a host cell and culturing the cell to express the  
 CC protein. (I) proteins and polynucleotides may be used to prevent,  
 CC diagnose and treat immune/hematopoietic-related diseases, especially  
 CC cancers and cancer metastases of hematopoietic-derived cells. AAK64703  
 CC to AAK87694 represent human immune/hematopoietic antigen genomic  
 CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169  
 CC represent sequences used in the exemplification of the present invention

 XX New nucleic acid that is a 5' expressed sequence tag (5' EST) for  
 PT obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for  
 PT diagnostic, forensic, gene therapy and chromosome mapping procedures.  
 PT  
 XX Claim 1; SEQ ID NO 18230; 71pp + Sequence Listing; English.  
 PS  
 XX The present sequence is one of a large number of 5' ESTs derived from  
 CC mRNAs encoding secreted proteins. No ORF has yet been conclusively  
 CC identified within the present sequence. The 5' ESTs were prepared from  
 CC total human RNAs or polyA+ RNAs derived from 30 different tissues. EST  
 CC sequences usually correspond mainly to the 3' untranslated region (UTR)  
 CC of the mRNA because they are often obtained from oligo-dT primed cDNA  
 CC libraries. Such ESTs are not well suited for isolating cDNA sequences  
 CC derived from the 5' ends of mRNAs and even in those cases where longer  
 CC cDNA sequences have been obtained, the full 5' UTR is rarely included. 5'  
 CC ESTs are derived from mRNAs with intact 5' ends and can therefore be used  
 CC to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in  
 CC diagnostic, forensic, gene therapy and chromosome mapping procedures.  
 CC They are used to obtain upstream regulatory sequences and to design  
 CC expression and secretion vectors

 XX  
 XX New isolated polynucleotides, which are differentially expressed in colon

cancer cell, useful for treating cancer, e.g. colon cancer, breast cancer, or pancreatic cancer.  
 Claim 1; SEQ ID NO 2805; 97pp; English.  
 The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which are differentially expressed in colon cancer cells. The invention also relates to vectors and host cells comprising a differentially expressed polynucleotide of the invention; a method for detecting a cancerous cell by detection of a gene product of the polynucleotides; a method for inhibiting a cancerous phenotype of a cell by inhibiting a gene product of the polynucleotides; a method of treating an individual with cancer by administration of a modulator of a gene product of the polynucleotides; and an isolated antibody that specifically binds to a polypeptide encoded by one of the 9672 polynucleotides. The polynucleotides, polypeptides, antibodies, and methods are useful for the detection of cancerous cells; for the diagnosis, prognosis and management of cancer; for the identification of agents that modulate the phenotype of cancerous cells; for the identification of therapeutic targets for cancer chemotherapy; and for the treatment of cancer, especially colon cancer and metastasized colon cancer, but also breast or pancreatic cancer. The polynucleotides are also useful as a source of probes or primers for use in diagnostic methods. The differentially expressed polynucleotides or their encoded proteins can additionally be used as vaccines to modulate primary immune responses for the prevention or treatment of cancer. The present sequence represents a specifically claimed polynucleotide which is differentially expressed in colon cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 29187; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAK62170 to AAK91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to

CC recombination. the protein can be used to identify other proteins  
CC involved in development and progression of macular degeneration. The  
CC present sequence is a genomic DNA fragment containing an exon of a retina  
CC specific gene of the invention

XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
XX useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 38694; 3071pp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
XX amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
XX activity, and can be used in gene therapy and vaccine production. (I)
XX proteins and polynucleotides may be used in the prevention, diagnosis and
XX treatment of diseases associated with inappropriate (I) expression. For
XX example, they may be used to treat disorders associated with decreased
XX expression by rectifying mutations or deletions in a patient's genome
XX that affect the activity of (I) by expressing inactive proteins or to
XX supplement the patients own production of (I). Additionally, (I)
XX polynucleotides may be used to produce the secreted (I), by inserting the
XX nucleic acids into a host cell and culturing the cell to express the
XX protein. (I) proteins and polynucleotides may be used to prevent,
XX diagnose and treat immune/haematopoietic-related diseases, especially
XX cancers and cancer metastases of haematopoietic-derived cells. AAK64703
XX to AAK87694 represent human immune/haematopoietic antigen genomic
XX sequences from the present invention. AAK54942 to AAK54950 and AAM82169
XX represent sequences used in the exemplification of the present invention

XX
XX The invention relates to human polynucleotides (AAI79941-AAI93841) and
XX the encoded proteins (AAO0010-AAO3910) that exhibit activity elating to
XX cytokine, cell proliferation or cell differentiation or which may induce
XX production of other cytokines in other cell populations. The
XX polynucleotides and polypeptides are useful in gene therapy, vaccines or
XX peptide therapy. The polypeptides have various cytokine-like activities,
XX e.g. stem cell growth factor activity, haematopoiesis regulating
XX activity, tissue growth factor activity, immunomodulatory activity and
XX activin/inhibin activity and may be useful in the diagnosis and/or
XX treatment of cancer, leukaemia, nervous system disorders, arthritis and
XX inflammation. Note: The sequence data for this patent did not form part
XX of the printed specification, but was obtained in electronic format
XX directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New nucleic acid for producing a polypeptide, detecting differentially  
PT expressed genes correlated with a cancerous state of a mammalian cell,  
PT and inhibiting tumor growth.  
XX  
XX Claim 1; SEQ ID NO 1717; 883pp + Sequence Listing; English.  
XX  
XX The invention relates to an isolated polynucleotide (ABN27253-ABN33262)  
CC with cytostatic activity. The polynucleotide is used to produce a  
CC polypeptide, to detect differentially expressed genes correlated with a  
CC cancerous state of a mammalian cell and to inhibit tumour growth. The  
CC polynucleotide is used as a probe in mapping and tissue profiling. The  
CC encoded polypeptide and antibodies to the polypeptide can also be used  
CC for therapeutic and diagnostic purposes. The polynucleotide is useful for  
CC gene therapy. Note: The sequence data for this patent did not form part  
CC of the printed specification, but was obtained in electronic format  
CC directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX  
XX New isolated polynucleotides, which are differentially expressed in colon  
PT cancer cell, useful for treating cancer, e.g. colon cancer, breast  
PT cancer, or pancreatic cancer.  
XX  
XX Claim 1; SEQ ID NO 6223; 97pp; English.  
XX  
XX The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which  
CC are differentially expressed in colon cancer cells. The invention also

CC relates to vectors and host cells comprising a differentially expressed  
CC polynucleotide of the invention; a method for detecting a cancerous cell  
CC by detection of a gene product of the polynucleotides; a method for  
CC inhibiting a cancerous phenotype of a cell by inhibiting a gene product  
CC of the polynucleotides; a method of treating an individual with cancer by  
CC administration of a modulator of a gene product of the polynucleotides;  
CC and an isolated antibody that specifically binds to a polypeptide encoded  
CC by one of the 9672 polynucleotides. The polynucleotides, polypeptides,  
CC antibodies, and methods are useful for the detection of cancerous cells;  
CC for the diagnosis, prognosis and management of cancer; for the  
CC identification of agents that modulate the phenotype of cancerous cells;  
CC for the identification of therapeutic targets for cancer chemotherapy;  
CC and for the treatment of cancer, especially colon cancer and metastasized  
CC colon cancer, but also breast or pancreatic cancer. The polynucleotides  
CC are also useful as a source of probes or primers for use in diagnostic  
CC methods. The differentially expressed polynucleotides or their encoded  
CC proteins can additionally be used as vaccines to modulate primary immune  
CC responses for the prevention or treatment of cancer. The present sequence  
CC represents a specifically claimed polynucleotide which is differentially  
CC expressed in colon cancer. Note: The sequence data for this patent did  
CC not form part of the printed specification, but was obtained in  
CC electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

PT cancers.  
XX  
XX Disclosure; Page 1075-1076; 1343pp; English.  
XX  
XX The present invention describes a new composition comprising an antisense  
CC oligonucleotide (ON) with low adenine (up to 15%), which targets  
CC nucleic acids involved in bronchoconstriction, allergies, and/or  
CC inflammation. The ON can have antiinflammatory, antiallergic,  
CC antiasthmatic, cytostatic and analgesic activities. The compositions are  
CC useful for the treatment of diseases associated with inflammation,  
CC impaired airways, including lung disease and diseases whose secondary  
CC effects afflict the lungs of a subject. They can be used for treating  
CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,  
CC impaired respiration, respiratory distress syndrome, pain, cystic  
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive  
CC pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,  
CC carcinomas, and cancers which may metastasise to the lungs, including  
CC breast and prostate cancer. The reduction of the adenine content of the  
CC ONs reduces side effects. The A-containing ONs break down with the  
CC release of deoxyadenosine which activates adenosine receptors causing  
CC bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the  
CC nucleotide sequences given in the sequence listing from the present  
CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185  
CC sequences are also called SEQ ID NO:1 to 185, but the sequences differ  
CC from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to  
CC AAA33922) are specifically claimed ONs from the present invention. N.B.  
CC Sequences given in the disclosure of the present invention do not match  
CC up with their corresponding SEQ ID NO: sequences given in the sequence  
CC listing

XX Disclosure; Page 1155; 1592pp; English.  
XX  
XX The present invention describes low adenine (A) content antisense  
CC oligonucleotides and compositions (I) comprising them. In the antisense  
CC oligonucleotides the A is replaced by a 'universal' or alternative base.  
CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,  
CC immunosuppressive, antiaesthmatic, hypotensive and cytostatic activities.  
CC The antisense oligonucleotides and (I) can be used to down-regulate the  
CC expression and/or activity of target polypeptides associated with  
CC lung/respiratory disorders and malignancies, such as stimulating and  
CC activating peptide factors and transmitters, transcription factors,  
CC immunoglobulins and antibodies, antibody receptors, cytokines and  
CC chemokines, endogenously produced specific and non-specific enzymes,  
CC binding proteins, adhesion molecules and their receptors, cytokine and  
CC chemokine receptors, adenosine receptors, bradykinin receptors, central  
CC nervous system (CNS) and peripheral nervous and non-nervous system  
CC receptors, CNS and peripheral nervous and non-nervous system peptide  
CC transmitters, defensins, growth factors, vasoactive peptides and  
CC receptors, binding proteins and malignancy associated proteins. The  
CC antisense oligonucleotides may be used in this way to treat disorders  
CC including respiratory obstruction (especially pulmonary obstruction  
CC and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or  
CC surfactant hypoproduction which are associated with a disease or  
CC condition selected from pulmonary vasoconstriction, inflammation,  
CC allergies, asthma, impeded respiration, respiratory distress syndrome  
CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary  
CC hypertension, emphysema, chronic obstructive pulmonary disease (COPD),  
CC pulmonary transplantation rejection, pulmonary infections, bronchitis,  
CC and/or cancer. AAF18434 to AAF21543 represent human polynucleotide  
CC fragments and antisense oligonucleotides used in the exemplification of

PT Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.
XX
PS Disclosure; SEQ ID NO 12178; 872pp; English.
XX
CC The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antinflammatory steroid and ubiquinone. A composition of the invention
CC has antinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO

XX  
XX Disclosure; SED ID No 939; 546pp; English.  
XX  
XX The present invention relates to the isolation of novel human respiratory  
CC antigens (AAU17685-AAU17975), and cDNA and genomic sequences encoding for  
CC these polypeptides. The sequences of the invention are useful for  
CC preventing, treating and/or prognosing disorders related to the  
CC respiratory system including throat disorders (e.g. vocal cord paralysis,  
CC tonsillitis, and laryngitis), lung disorders e.g. pneumonia, allergic  
CC disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose  
CC disorders and cancers of the respiratory tissues e.g. lung cancer. The  
CC polynucleotide sequences of the invention are useful in gene therapy and  
CC antisense therapy. AAS28161-AA328764 represent genomic sequences encoding  
CC for novel human respiratory antigens. Note: The sequence data for this  
CC patent did not form part of the printed specification, but was obtained  
CC in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-457723/49.
XX
XX Isolated polypeptide for treating, preventing and/ or prognosing
XX respiratory disorders related to the lung including lung cancers and also
XX for testing and detection e.g. diagnosis.
XX
XX Claim 1; SEQ ID NO 260; 507pp; English.
XX
XX Sequences AAS29931-AAS30164 represent genomic DNA molecules, which encode
XX the lung antigen polypeptides of the invention. Lung antigen polypeptides
XX and their associated polynucleotides are useful in the diagnosis,
XX treatment and prevention of various types of disorders in e.g. humans,
XX mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A
XX pathological condition can be determined by detecting the presence or
XX absence of a mutation in a lung antigen polynucleotide. The treatable
XX disorders include autoimmune diseases such as rheumatoid arthritis,
XX hyperproliferative disorders such as neoplasms of the breast or liver,
XX cardiovascular disorders such as cardiac arrest, cerebrovascular
XX disorders such as cerebral ischaemia, nervous system disorders such as
XX Alzheimer's disease, infections caused by bacteria, viruses and fungi,
XX ocular disorders such as corneal infection, endocrine disorders such as
XX premature labour and infertility, gastrointestinal disorders such as
XX Crohn's disease, renal disorders such as asthma and pleurisy. The polypeptides can
XX also be used to aid wound healing, to prevent skin aging due to sunburn,
XX to maintain organs before transplantation, to regenerate tissues and in
XX chemotaxis. The polypeptides can also be used as a food additive or
XX preservative to increase or decrease storage capabilities. Note: The
XX sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences

XX
XX Novel isolated lung antigen polypeptides useful for treating, preventing,
PT diagnosing acute myelogenous leukemias, adenocarcinoma, thrombocytopenia,
PT Von Willebrand's disease.
XX
XX Disclosure; SEQ ID NO 260; 178pp; English.
XX
XX The invention relates to an isolated lung antigen polypeptide sequence or
CC encoded sequence in a cDNA clone. The polypeptide and its polynucleotide
CC are useful for treating, preventing, diagnosing and/or prognosing
CC diseases and/or disorders such as pathological cell proliferative
CC neoplasias e.g. acute myelogenous leukaemias, adenocarcinoma; respiratory
CC disorders such as chronic rhinitis, sinusitis; immunodeficiencies such as
CC X-linked agammaglobulinaemia, X-linked infantile agammaglobulinaemia;
CC inflammatory disorders such as adrenailitis, alveolitis; immune complex
CC diseases such as serum sickness, polyarteritis nodosa; bleeding disorders
CC such as thrombocytopenia, Von Willebrand's disease; acquired platelet
CC dysfunction such as kidney failure, multiple myeloma; disorders
CC associated with macrophage numbers and/or macrophage function such as
CC Gaucher's disease, Niemann-Pick disease; tumours such as colon cancer,
CC pancreatic cancer; renal disorders such as kidney failure, nephritis;
CC bone disorders such as Albers-Schonberg disease, bowlegs; muscle
CC disorders such as Becker's muscular dystrophy, Duchenne's muscular
CC dystrophy; nervous disorders such as ischaemic lesions, traumatic lesions
CC ; endocrine disorders such as Cushing's syndrome, corticosteroid

(PUMA-) HUMAN GENOME SCI INC.
XX
XX
PI Rosen CA, Ruben SM, Barash SC;
XX WPI; 2003-902033/82.
XX Novel respiratory system antigen and polynucleotides encoding the
PT polypeptides, useful for treating diagnosing, treating or preventing
PT tonsillitis, pneumonia, asthma and cystic fibrosis, emphysema, throat
PT cancer.
XX Disclosure; SEQ ID NO 939; 236pp; English.
XX The invention describes an isolated polypeptide (I) comprising an amino
CC acid sequence that is at least 90% identical to polypeptide fragment of
CC any one of 299 respiratory system antigen sequences (PS) and having
CC biological activity, polypeptide domain or epitope of PS, full-length
CC protein of PS, or variant, allelic variant or species homolog of PS. (I)
CC or a polynucleotide (II) encoding (I) is also useful for diagnosing a
CC pathological condition or a susceptibility to a pathological condition in
CC a subject which involves determining the presence or absence of mutation
CC in (II) or determining the presence or amount of expression of (I) in a
CC biological sample and diagnosing a pathological condition based on the
CC result. The human respiratory system associated polynucleotides, the
CC polypeptides encoded by them, and antibodies that immunospecifically bind
CC these polypeptides are useful in diagnosis, treatment, prevention and/or
CC prognosis of disorders of respiratory system such as throat disorders
CC (e.g., vocal cord paralysis, tonsillitis, and laryngitis), lung disorders
CC (e.g., pneumonia), allergic disorders, (e.g., asthma and eosinophilic
CC pneumonia), pleurisy, cystic fibrosis, emphysema, histiocytosis,
CC sarcoidosis, nose disorders (rhinitis and sinusitis), neoplasms and/or
CC cancers of respiratory tissues (e.g., throat cancer, lung cancer, and
CC cancer of the nose). The polynucleotides are useful in gene therapy
CC techniques, for chromosome identification, identifying individuals from

XX  
XX (HUMA-) HUMAN GENOME SCI INC.  
XX  
XX Rosen CA, Ruben SM, Barash SC;  
XX WPI; 2003-765403/72.  
XX  
XX New human respiratory system-related polypeptide and genes, useful for  
XX treating, preventing or diagnosing e.g. pneumonia, lung cancer, cystic  
XX fibrosis, asthma, sarcoidosis, rhinitis, leukemia, inflammations or  
XX sinusitis.  
XX  
XX Disclosure; SEQ ID NO 939; 202pp; English.  
XX  
XX This invention is related to a novel isolated polypeptide, which  
XX comprises a human respiratory system-related polypeptide, and the DNA

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Denatured mRNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I, and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail, is GTGGGTGGA. This library was created for the University of Iowa Mouse Brain Molecular Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institutes of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

/notes="vector: pSPORT1 (Gibco/BRL Life Technology);  
Site 1: SalI; Site 2: NotI; Total RNAs were extracted from  
7 Newborn Ovary. The double-stranded cDNA was synthesized  
by Gibco's kit with an Oligo(dT) primer [NotI  
primer-adaptor from GibcoBRL]  
[5'-pGACTAGTCTAGATCGGAGCGCCCTTTT-3'] from  
2.56ug of total RNA. The double-stranded cDNAs were  
treated with T4 DNA polymerase and purified by  
ethanol-precipitation. The cDNAs were ligated to  
Lone-linker Li-Sal3 (include SalI sequence). The cDNAs  
were purified by phenol/chloroform and separated from  
free linkers by Centricon 100. Then, cDNAs were amplified  
by long-range high fidelity PCR using Takara's Ex Tag  
polymerase. Then, the cDNAs were purified by  
phenol/chloroform and by Centricon 100. The cDNAs were  
digested with SalI and NotI enzymes. Then, the cDNAs were  
size selected by Gibco's Size Fractionation Column. The  
cDNAs were cloned into SalI/NotI site of pSPORT1 plasmid  
vector. The DH10B E. coli host was transformed with the  
ligation mixture by chemical method. The library was  
constructed by Xiaohong Wang and Yulan Piao."

cDNA Library Preparation: M.B. Soares Lab Clone distribution:  
Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It  
should be noted that Bento Soares is generating a small number of  
additional specialized non-redundant arrays of BMAP cDNAs whose  
availability will be considered under appropriate and limited  
collaborative arrangements. The following repetitive elements were  
found in this cDNA sequence: 1-82, >PB1D10\$INE/Alu 87-108,  
>AT rich#Low complexity 344-364, >AT rich#Low complexity

Seq primer: M13 Reverse.

/lab\_host="DH10B (Life Technologies)"  
/clone\_lib="NIH BMAP M S4"  
/notes="vector: pT7T3D-Pac (Pharmacia) with a modified  
polylinker; Site 1: Not I; Site 2: Eco RI; The  
NIH BMAP\_M S4 library is a subtracted library of a series,  
ultimately derived from a mixture of individually tagged  
normalized libraries from ten regions of the mouse brain  
(cerebellum, brain stems, olfactory bulbs, hypothalamus,  
cortex, amygdala, basal ganglia, pineal gland, striatum,  
hippocampus) after a series of subtractions to reduce the  
representation of cDNAs from which ESTs had already been  
generated. The following serially subtracted libraries  
were generated in this process: NIH BMAP M S4,  
NIH BMAP M S3.3, NIH BMAP M S3.2, NIH BMAP M S3.1,  
NIH BMAP\_M S2, NIH BMAP\_M S1. The subtracted library  
(NIH BMAP\_M S4) was constructed as follows: PCR amplified  
cDNA inserts from NIH BMAP\_M S3.3, NIH BMAP\_M S3.2, and  
NIH BMAP\_M S3.1 clones from which 3' ESTs had been derived  
was used as a driver in a hybridization with a pool of  
the NIH BMAP M S3.3, NIH BMAP M S3.2, and NIH BMAP M S3.1  
libraries in the form of single-stranded circles. The  
remaining single-stranded circles (subtracted library)  
was purified by hydroxyapatite column chromatography,  
converted to double-stranded circles and electroporated  
into DH10B bacteria (Life Technologies) to generate the  
NIH BMAP\_M S4 library. This procedure has been previously  
described [Bonaldi, Lennon and Soares, Genome Research  
6:791-806, 1996]"

 The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized brain stems library cDNA library Preparation: M.B. Soares lab clone distribution: Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It should be noted that Bento Soares is generating a small number of additional specialized non-redundant arrays of BMAP cDNAs whose availability will be considered under appropriate and limited collaborative arrangements The following repetitive elements were found in this cDNA sequence: 256-277, >AT-rich#Low complexity 282-363, >PB1D10#SINE/Alu  
 Seq primer: M13 Forward  
 POLYA=Yes.

 /note="Vector: pTV73D-Pac (Pharmacia) with a modified polylinker; Site 1: Not I; Site 2: Eco RI; The NIH BMAP M\_S4 library is a subtracted library of a series, ultimately derived from a mixture of individually tagged (cerebellum, brain stems, olfactory bulbs, hypothalamus, cortex, amygdala, basal ganglia, pineal gland, striatum, hippocampus) after a series of subtractions to reduce the representation of cDNAs from which ESTs had already been generated. The following serially subtracted libraries were generated in this process: NIH BMAP M\_S4, NIH BMAP M\_S3.3, NIH BMAP M\_S3.2, NIH BMAP M\_S1, NIH BMAP M\_S4) was constructed as follows: PCR amplified cDNA inserts from NIH BMAP M\_S3.3, NIH BMAP M\_S3.2, and NIH BMAP M\_S3.1 clones from which 3' ESTs had been derived was used as a driver in a hybridization with a pool of the NIH BMAP M\_S3.3, NIH BMAP M\_S3.2, and NIH BMAP M\_S3.1 libraries in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the NIH BMAP M\_S4 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:791-805, 1996)

/note="Vector: pCMV-SPORT6 (Invitrogen); Site 1: SalI; Site 2: NotI; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (<http://lgsun.grc.nia.nih.gov/cDNA>). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 3 embryos at 11.5-days postcoitum. Double-stranded cDNAs were synthesized with an Oligo(dT) primer (Invitrogen): 5'-pGACTAGTCTAGATCGCGAGCGCCCTCTTTTTTTTTT-3' from 2ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Lone-linker LL-SalI, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pCMV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 3.3Kb. The library was constructed by Yulan Piao."

/clone_lib="NCI CGAP GCB1"
/notes="Vector: p773D-Pac (Pharmacia) with a modified
polylinker; Site 1: Not I; Site 2: Eco RI; 1st strand cDNA
was prepared from human tonsillar cells enriched for
germinal center B cells by flow sorting (CD20+, IgD-),
provided by Dr. Louis M. Staudt (NCI), Dr. David Allman
(NCI) and Dr. Gerald Marti (CBER). cDNA synthesis was
primed with a Not I - oligo(dT) primer
[5'-TGTTCAATCTGAAGTGGAGCGCGCTCATTTTTTTTTTTT-3'
]. Double-stranded cDNA was ligated to Eco RI adaptors
(Pharmacia), digested with Not I and cloned into the Not I
and Eco RI sites of the modified p773 vector. Library
went through one round of normalization, and was
constructed by Bento Soares and M. Fatima Bonaldo."

purified by ethanol-precipitation. The cDNAs were ligated to lone-linker lU-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORT1 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.2 kb. The library was constructed by Yulan Piao (NIA)."

musculus C57BL/6J (male) was obtained from the Jackson

Laboratory Mouse DNA Resource

(http://www.jax.org/resources/documents/dnares/). The DNA

was hydrodynamically sheared by repeated passage through a

0.005 inch orifice at constant velocity. The sheared DNA

was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptor mouse DNA was annealed to adaptor vector DNA, and transformed into chemically-competent *E. coli* XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

1 (bases 1 to 100983)
Direct Submission
Submitted (04-FEB-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Mar 21, 2002 this sequence version replaced gi:19031807.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep -----
Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: vegas@sanger.ac.uk
-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
RP23-430121 is from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBAC3.6.

 Center project name: C\_PT010P16

**NOTICE:**  
 This sequence was finished as follows unless otherwise noted:  
 all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

**MAPPING INFORMATION:**  
 Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

**SOURCE INFORMATION:**  
 The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Clinton', Yerkes #C0471; birthdate: 6-6-80). The clone and detailed information can be obtained from ResGen (<http://www.resgen.com>) or Pieter de Jong and co-workers at <http://www.bacpac.chori.org>.

This sequence is the entire insert of the clone.

Quality coverage: 12.4 in Q20.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*
* 1 67177: contig of 67177 bp in length
* 67178 67277: gap of 100 bp
* 67278 91121: contig of 23844 bp in length
* 91121 91221: gap of 100 bp
* 91222 214993: contig of 123772 bp in length.

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (22-SEP-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Sep 19, 2002 this sequence version replaced gi:21744211.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the
sequence may extend beyond the ends of the clone and there may be
contigs that consist entirely of whole genome shotgun sequence
reads. Both end sequences and whole genome shotgun sequence only
contigs will be indicated in the feature table.

-----
* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.
*
* 15842: contig of 15842 bp in length
* 15843 15942: gap of unknown length
* 15943 276234: contig of 260292 bp in length.

COMMENT  
On Jul 31, 2004 this sequence version replaced gi:50428583.  
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

3': RP11-539G11, BX323048, 45716-bp overlap  
Note: This is a partial submission. The full clone overlaps are  
not included.

## Sequence Quality Assessment:

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. Quality levels above 40 are expected to have less than 1 error in 10,000 bp. Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:

all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

## Sequence Validation:

This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping

clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

#### MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see <http://www.nhgri.nih.gov/DIR/CTB/CHR7>, send <mailto:egreen@nhgri.nih.gov>, or see <http://genome.wustl.edu>

#### SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tatenio,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

VECTOR: pBACe3.6

#### NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-457C23 the clone sequenced to the right is RP5-953F6, 200 bp overlap. Actual start of this clone is at base position 1 of RP11-133L20 actual end is at base position 37782 of RP5-953F6.

-----
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep Repeat names
beginning 'Dr' were identified by the Recon repeat discovery system
(Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr'
were identified by Rick Waterman (Stephen Johnson lab, WashU). For
further information see http://www/Projects/D_rerio/fishmask.shtml

----- Summary Statistics

Sequencing vector: M13; M77815; 100% of reads

Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.960731  
Consensus quality: 170392 bases at least Q40  
Consensus quality: 176132 bases at least Q30  
Consensus quality: 177464 bases at least Q20  
Insert size: 176000; agarose-fp  
Insert size: 178506; sum-of-contigs  
Quality coverage: 6.7 in Q20 bases; agarose-fp  
Quality coverage: 6.6 in Q20 bases; sum-of-contigs

-----  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 4 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

\* 1 1239: contig of 1239 bp in length  
\* 1240 1339: gap of 100 bp  
\* 1340 23256: contig of 21917 bp in length  
\* 23257 23356: gap of 100 bp  
\* 23357 88091: contig of 64735 bp in length  
\* 88092 88191: gap of 100 bp  
\* 88192 178806: contig of 90615 bp in length.

-----

NOTICE: This sequence may not represent the entire insert of this

clone. It may be shorter because we only sequence overlapping

clone sections once, or longer because we provide a small overlap

between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:

all regions were double stranded, sequenced with an alternate

chemistry, or covered by high quality data (i.e., phred quality >=

30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by sequence

from more than one subclone; and the assembly was confirmed by

restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D.

McPherson, Department of Genetics, Washington University, St. Louis

MO. For additional information about the map position of this

sequence, see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:

The RP11-11 human BAC library was made from the blood of one male

donor, as described by Oseegawa, K., Woon, P.Y., Zhao, B., Frengen, E.,

Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved

approach for construction of bacterial artificial chromosome

libraries. Genomics 51:1-8. The clone may be obtained either from

Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong

and coworkers at <http://www.chori.org>

VECTOR: pBACE3.6

## NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-703H20; the clone sequenced

to the right is RP11-556N4. Actual start of this clone is at base

position 1995 of RP11-703H20; actual end is at base position 181489

of RP11-804N11.

The region from 97601 to 97728 is covered only by a per product

from clone DNA. Data from AC053517 was used to finish AC104828.

On May 9, 2003 this sequence version replaced gi:24941198.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

On Jun 29, 2005 this sequence version replaced gi:62945466.  
The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
in the feature table below represents a scaffold in the Atlas  
assembly (a 'contig-scaffold'). Within each contig-scaffold,  
individual sequence contigs are ordered and oriented, and separated  
by sized gaps filled with Ns to the estimated size. The sequence  
may extend beyond the ends of the clone and there may be sequence  
contigs within a contig-scaffold that consist entirely of whole  
genome shotgun sequence reads. Both end sequences and whole genome  
shotgun sequence only contigs will be indicated in the feature  
table.

          Contact: zfsh-help@sanger.ac.uk
          -----
          During sequence assembly data is compared from overlapping clones.
          Where differences are found these are annotated as variations
          together with a note of the overlapping clone name. Note that the
          variation annotation may not be found in the sequence submission
          corresponding to the overlapping clone, as we submit sequences with
          only a small overlap as described above.
```

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a VAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: En:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at

[http://www.sanger.ac.uk/projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/projects/C_elegans/wormpep) Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhiyong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see

[http://www.sanger.ac.uk/projects/D\\_rerio/fishmask.shtml](http://www.sanger.ac.uk/projects/D_rerio/fishmask.shtml) CH211-209P5 is from a CHORI-211 BAC library

VECTOR: pTARBAC2.1.

COMMENT

On May 10, 2003 this sequence version replaced gi:25095373.

The sequence in this assembly is a combination of BAC based reads

and whole genome shotgun sequencing reads assembled using Atlas

(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described

in the feature table below represents a scaffold in the Atlas

assembly (a 'contig-scaffold'). Within each contig-scaffold,

individual sequence contigs are ordered and oriented, and separated

by sized gaps filled with Ns to the estimated size. The sequence

may extend beyond the ends of the clone and there may be sequence

contigs within a contig-scaffold that consist entirely of whole

genome shotgun sequence reads. Both end sequences and whole genome

shotgun sequence only contigs will be indicated in the feature

table.

----- Project Information

Center project name: GHIX

Center clone name: CH230-92N23

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 213914 bases at least Q40

Consensus quality: 218379 bases at least Q30

Consensus quality: 221566 bases at least Q20

Estimated insert size: 232388; sum-of-contigs estimation

Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

-----  
\* NOTE: Estimated insert size may differ from sequence length  
\* (see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 11 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

-----  
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.  
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.  
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C\_elegans/wormpep/Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.  
Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D\_rerio/fishmask.shtml DKXY-23018 is from a Zebrafish BAC library

COMMENT On Feb 1, 2003 this sequence version replaced GI:27902085.  
Sequence from the Mouse Genome Sequencing Consortium whole genome  
shotgun may have been used to confirm this sequence. Sequence data  
from the whole genome shotgun alone has only been used where it has  
a phred quality of at least 30.

----- Genome Center  
Center: Wellcome Trust Sanger Institute  
Center code: SC  
Web site: <http://www.sanger.ac.uk>  
Contact: humquery@sanger.ac.uk  
-----

During sequence assembly data is compared from overlapping clones.  
Where differences are found these are annotated as variations  
together with a note of the overlapping clone name. Note that the  
variation annotation may not be found in the sequence submission  
corresponding to the overlapping clone, as we submit sequences with  
only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all  
regions were either double-stranded or sequenced with an alternate  
chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by at least  
one plasmid subclone or more than one M13 subclone; and the  
assembly was confirmed by restriction digest, except on the rare  
occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession  
numbers given in the feature table with their source databases:

Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information  
on the WORMPEP database can be found at  
[http://www.sanger.ac.uk/Projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/C_elegans/wormpep)  
from the RPCI-23 Mouse BAC Library  
constructed by the group of Pieter de Jong.

Direct Submission

Unpublished

2 (bases 1 to 196286)

Worley, K.C.

Direct Submission

Submitted (18-DEC-2004)

Human Genome Sequencing Center, Baylor  
College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

Sequencing is completed to a minimum standard of double strand  
coverage with a minimum of 2 clones and 2 reads with no ambiguities  
or 2 chemistries with a minimum of 2 clones and 3 reads with no  
ambiguities. If the sequence quality does not meet this standard,  
it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by  
Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui

Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

## COMMENT

On Sep 14, 2002 this sequence version replaced gi:21736569.  
The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
in the feature table below represents a scaffold in the Atlas  
assembly (a 'contig-scaffold'). Within each contig-scaffold,  
individual sequence contigs are ordered and oriented, and separated  
by sized gaps filled with Ns to the estimated size. The sequence  
may extend beyond the ends of the clone and there may be sequence  
contigs within a contig-scaffold that consist entirely of whole  
genome shotgun sequence reads. Both end sequences and whole genome  
shotgun sequence only contigs will be indicated in the feature  
table.

----- Genome Center

----- Project Information  
Center project name: GNMF  
Center clone name: CH230-64A8  
----- Summary Statistics  
Assembly program: Phrap; version 0.990329  
Consensus quality: 229400 bases at least Q40  
Consensus quality: 232950 bases at least Q30  
Consensus quality: 235263 bases at least Q20  
Estimated insert size: 253424; sum-of-contigs estimation  
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation  
-----  
\* NOTE: Estimated insert size may differ from sequence length  
\* (see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html))  
\* NOTE: This sequence may represent more than one clone.  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 1 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* provided by the submittor.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
\* 1 261112: contig of 261112 bp in length.

## COMMENT

Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,  
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: [vega@sanger.ac.uk](mailto:vega@sanger.ac.uk)  
Clone requests: [clonerequest@sanger.ac.uk](mailto:clonerequest@sanger.ac.uk)  
On Nov 25, 2001 this sequence version replaced gi:17017834.  
The following abbreviations are used to associate primary accession  
numbers given in the feature table with their source databases:  
Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information  
in the WORMPEP database can be found at  
<http://www.sanger.ac.uk/projects/C.elegans/wormpep> This sequence  
was generated from part of bacterial clone contigs of human  
chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping  
Group. Further information can be found at  
<http://www.sanger.ac.uk/HGP/Chr9>  
RP11-100N5 is from the library RPI-11.1 constructed by the group  
of Pieter de Jong. For further details see  
<http://www.chori.org/bacpac/home.htm>  
VECTOR: pBACe3.6

DEFINITION Leishmania major strain Friedlin, \*\*\* SEQUENCING IN PROGRESS \*\*\*.

ACCESSION CT005261 AC008240

VERSION CT005261.1 GI:68224038

KEYWORDS HTG; HTGS PHASE2.

SOURCE Leishmania major

ORGANISM Leishmania major

Eukaryota; Euglenozoa; Kinetoplastida; Trypanosomatidae;

1 (bases 1 to 716508)

Peacock,C.S., Murphy,L., Ivens,A.C., Berriman,M., Blackwell,J.,

Smith,D., Collins,M., Foster,N., Harris,D., Oliver,K., O'Neil,S.,

Saunders,D., Seeger,K., Warren,T., Rajandream,M. and Barrall,B.G.  
Direct Submission  
Submitted (15-JUN-2005) Peacock C.S., The Wellcome Trust Sanger  
Institute Genome Campus, Hinxton, Cambridge CB10 1SA, UK  
On Jul 6 2005 this sequence version replaced gi:29825871.  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 1 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* provided by the submitter.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
\* 1 716608: contig of 716608 bp in length.

COMMENT
On Nov 26, 2002 this sequence version replaced gi:2218467.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 19919: contig of 19919 bp in length
* 19920 20074: gap of unknown length
* 20075 59697: contig of 39623 bp in length
* 59698 59851: gap of unknown length
* 59852 124350: contig of 64499 bp in length.

Center project name: efl  
Center clone name: 279N10  
The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.  
----- Summary Statistics

3 (bases 1 to 154763)  
Cow Genome Sequencing Consortium.  
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Jun 29, 2005 this sequence version replaced gi:59276096.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

XX
XX Novel human cancer associated protein encoded within open reading frame
XX of cancer associated gene, useful as targets for diagnosing cancer.
XX
XX Claim 16; SEQ ID NO 770; 182pp; English.
XX
XX The invention relates to cancer-associated proteins (CAP) and the cancer-
XX associated (CA) nucleic acids encoding them. The invention also relates
XX to a method for treating cancers involving administering to a patient an
XX inhibitor of CAP, and a method of screening for anticancer activity in a
XX potential drug involving providing a cell that expresses a CA gene,
XX contacting a tissue sample derived from a cancer cell with an anticancer
XX drug candidate and monitoring the effect of the anticancer drug candidate
XX on expression of the CA gene. The CAP proteins are useful for detecting
XX cancer associated with expression of a CAP protein in a test cell sample
XX and for screening for a bioactive agent capable of modulating the
XX activity of a CAP protein. The CA nucleic acids are useful for diagnosing
XX cancer, involving determining the expression of a CA nucleic acid in a
XX tissue. This sequence represents a human CA gene of the invention. Note:
XX The sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences

XX New composition comprising two or more isolated polypeptides, useful for  
PT preparing a medicament for treating pain in an animal.  
PT  
XX  
XX Example 1; Page; 1017pp; English.  
XX  
XX The invention discloses a composition comprising two or more isolated rat  
CC or human polynucleotides or a polynucleotide which represents a fragment,  
CC derivative or allelic variation of the nucleic acid sequence. Also  
CC claimed are a vector comprising the novel polynucleotide, a host cell  
CC comprising the vector, a method for identifying a nucleotide sequence  
CC which is differentially regulated in an animal subjected to pain and a  
CC kit to perform the method, an array, a method for identifying an agent  
CC that increases or decreases the expression of the polynucleotide sequence  
CC that is differentially expressed in neuronal tissue of a first animal  
CC subjected to pain, a method for identifying a compound which regulates  
CC the expression of a polynucleotide sequence which is differentially  
CC expressed in an animal subjected to pain, a method for identifying a  
CC compound that regulates the activity of one or more of the  
CC polynucleotides, a method for producing a pharmaceutical composition, a  
CC method for identifying a compound or small molecule that regulates the  
CC activity in an animal of one or more of the polypeptides given in the  
CC specification, a method for identifying a compound useful in treating  
CC pain and a pharmaceutical composition comprising the one or more  
CC polypeptides or their antibodies. The polynucleotide or the compound that  
CC modulates its activity is useful for preparing a medicament for treating  
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction  
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene  
CC therapy). The sequence presented is a rat DNA (described in Table 3 of  
CC the specification) which encodes one of the polypeptides of the invention  
CC which is differentially expressed during pain. Note: The sequence data  
CC for this patent did not form part of the printed specification, but was  
CC obtained in electronic form directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

XX Claim 1; Page 638; 1963pp; English.  
PS  
XX Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and  
CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The  
CC invention also relates to vectors and recombinant host cells comprising a  
CC nucleotide of the invention, methods of producing the novel polypeptides,  
CC antibodies against the polypeptides, methods of detecting the nucleotides  
CC or polypeptides in a sample, and methods of identifying compounds which  
CC bind to polypeptides of the invention. Although novel, many of the  
CC polypeptides of the invention have homology to known proteins, thereby  
CC giving an insight into their probable biological activities, and hence  
CC potential therapeutic applications. The polypeptides of the invention may  
CC have various activities, including cytokine, cell proliferation or cell  
CC differentiation activities; stem cell growth factor activity;  
CC haematopoiesis regulatory activity; tissue growth activity;  
CC immunomodulatory activity; activin- or inhibin-related activities;  
CC chemotactic or chemokinetic activities; haemostatic, thrombotic or  
CC thrombolytic activities; receptor or ligand activities; or may be  
CC involved in oncogenesis, cancer cell proliferation or metastasis.  
CC Depending on their biological activities, polypeptides and nucleotides of  
CC the invention are useful for preventing, treating or ameliorating medical  
CC conditions, e.g., by protein or gene therapy. Such conditions include  
CC cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell  
CC disorders), chronic inflammatory conditions (e.g., asthma or arthritis),  
CC proliferative retinopathy, atherosclerosis, coronary heart disease,  
CC arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal  
CC vascular growth. Polypeptides involved with tissue regeneration and  
CC repair (or nucleic acids encoding them) may be used to promote wound  
CC healing (e.g., of burns, incisions and ulcers), while those with  
CC immunomodulatory activities may be used in the treatment of viral,  
CC bacterial and fungal infections in addition to immune disorders.  
CC Polypeptides with growth factor activity may be used in cell cultures to  
CC promote cell growth. For example, such polypeptides may be used to  
CC manipulate stem cells in culture to give rise to neuroepithelial cells  
CC that can be used to augment or replace cells damaged by illness,

CC autoimmune disease or accidental damage. The polypeptides and nucleotides  
CC may also be used in the diagnosis of the above conditions, and in drug  
CC screening techniques. The present sequence represents a cDNA encoding a  
CC novel human polypeptide of the invention

CC The invention relates to an isolated polynucleotide encoding a

polypeptide with biological activity. The polynucleotides and

polypeptides are useful in diagnostics, forensics, gene mapping,

CC identification of mutations responsible for genetic disorders and other

traits, to assess biodiversity, as nutritional sources or supplements.

CC The polynucleotides may also be used as molecular weight markers,

CC chromosome markers or map related gene positions, or as an antigen to

raise anti-DNA antibodies or elicit immune response. The polypeptides are

CC useful for raising antibodies, as markers for tissues in which the

corresponding polypeptide is expressed, for re-engineering damaged or

CC diseased tissues, for treating myeloid or lymphoid cell disorders, in

CC bone cartilage, tendon, ligament and/or nerve tissue growth or

regeneration, in wound healing, in tissue repair and replacement, in

CC

CC healing of burns, incisions and ulcers, and in treating cancer. The

CC The invention relates to a novel isolated polynucleotide comprising any  
of the 235 nucleotide sequences described in the specification. The  
CC invention further comprises: an isolated polynucleotide encoding a

polypeptide with biological activity, where the polynucleotide hybridizes

to one of the 235 novel polynucleotides under stringent hybridization

conditions, or having greater than about 99% sequence identity with the

novel polynucleotide; a vector comprising a novel polynucleotide; an

expression vector comprising the novel polynucleotide; a host cell

genetically engineered to comprise the novel polynucleotide, which can be

operatively associated with a regulatory sequence that modulates

expression of the polynucleotide in the host cell; an isolated

polypeptide encoded by the novel polynucleotide, or a polynucleotide

hybridizing under stringent conditions to the novel polynucleotide; a

composition comprising the polypeptide and a carrier; an antibody

directed against the polypeptide; a method for detecting the novel

polynucleotide in a sample; a method for detecting the polypeptide in a

sample; a method for identifying a compound that binds to the polypeptide

; a method for producing the polypeptide; an isolated polypeptide

comprising any of the 235 amino acid sequences described in the

specification; and a collection of polynucleotides comprising of at least

one of the polynucleotides cited above. The polypeptides and

polynucleotides of the invention have antiinflammatory, cytostatic, and

CC disease, epilepsy, angina, neurodegeneration, diabetes, anxiety,  
 CC depression, schizophrenia, viral disease, gastric ulcers, stroke,  
 CC Alzheimer's disease and as a contraceptive

 XX  
 PS Claim 9; SEQ ID NO 221; 97pp + Sequence Listing; Japanese.  
 XX  
 CC The invention relates to a method for screening G protein-coupled  
 CC receptor (GPCR) genes (ABZ42980-ABZ43216) and/or GPCR proteins (ABP95596-  
 CC ABP95942) by extracting open-reading frames containing 6-8 transmembrane  
 CC domains with 250-1000 amino acid residues to give a gene homologous with  
 CC a known GPCR gene. The receptor proteins and encoded genes are useful for  
 CC studying in vivo signal transduction mechanism and identifying targets  
 CC for drug development e.g. based on olfactory and gustatory receptors in  
 CC form of agonists and antagonists by screening intrinsic and extrinsic  
 CC ligands as bitter taste inhibitors, taste enhancers and fragrance  
 CC improvers. Note: The sequence data for this patent did not form part of  
 CC the printed specification, but was obtained in electronic format directly

 PT New stress-responsive nucleic acid, useful for altering the  
 PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold  
 PT stress, salt stress or osmotic stress.  
 XX  
 PS Disclosure; SEQ ID NO 10147; 89pp; English.  
 XX  
 CC The invention relates to novel abiotic stress responsive polynucleotides  
 CC and polypeptides. Also disclosed are vectors, expression cassettes, host  
 CC cells, and plants containing such polynucleotides. Also disclosed are  
 CC methods for using the polynucleotides and polypeptides to alter the  
 CC responsiveness of a plant to abiotic stress. The invention is useful in  
 CC agriculture. The nucleic acid is useful for determining whether a test  
 CC plant has been exposed to an abiotic stress condition. It is also useful  
 CC for selecting an agent that alters abiotic stress regulated  
 CC polynucleotide expression in a plant cell, and to identify a homolog or  
 CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid  
 CC molecule and the polypeptide encoded by it are useful in altering the  
 CC responsiveness of a plant to an abiotic stress, such as cold stress, salt  
 CC stress, osmotic stress or any of their combinations. The present sequence  
 CC is used in the exemplification of the invention

 XX New polynucleotides which encode polypeptides involved in olfactory  
 PT sensation for identifying olfactory agonists and antagonists.  
 PT  
 XX Claim 8; Page 439; 1857pp; English.  
 XX  
 XX The present sequence is one of a number of isolated polynucleotides which  
 CC encode polypeptides involved in olfactory sensation. The polynucleotides  
 CC can be used in screening for olfactory agonists and antagonists. The  
 CC methods allow for the determination of primary scents and the  
 CC identification of the odour receptors used to detect these primary  
 CC scents. The methods also enable determination of secondary scents and the  
 CC identification of combinations of odour receptors that are involved in  
 CC detecting such secondary scents. This enables the construction of a scent  
 CC representation (also called a scent fingerprint or scent profile), which  
 CC may be used to re-create and edit scents. Libraries of olfactory  
 CC receptors are useful for determining the interaction pattern of a  
 CC composition with the receptors, and can be used for determining  
 CC differences in the olfactory faculties of different individuals

 XX  
 XX This invention describes a novel disease detection and treatment molecule  
 CC polypeptide (MDDT) which has anti-inflammatory, immunosuppressive,  
 CC osteopathic, cycostatic, anti-HIV, haemostatic, nephrotropic,  
 CC antianaemic, antipsoriatic and hepatotropic activity. The polynucleotides  
 CC and the polypeptides of the invention can be used for gene therapy,  
 CC protein replacement therapy and are useful for treating a variety of  
 CC diseases or conditions. These polypeptides or polynucleotides are  
 CC particularly useful for diagnosing, treating or preventing cell  
 CC proliferative disorders (e.g. cancers including adenocarcinoma,  
 CC leukaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's  
 CC disease, acquired immunodeficiency syndrome (AIDS), Goodpasture's  
 CC syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or  
 CC hepatitis. ABX34440-ABX34835 encode the MDDT polypeptides represented in  
 CC ABU1450-ABU11845, described in the disclosure of the invention. NOTE:

XX The invention describes a novel isolated polypeptide, selected from a  
 CC group of 21 G-protein coupled receptor polypeptides (GCREC) and useful in  
 CC vaccines and gene therapy. The polypeptide (I) is useful for screening  
 CC for agonist or antagonist of (I), compounds specifically binding to (I),  
 CC or compounds that modulate the activity of (I). The polynucleotide  
 CC encoding (I) is useful for screening a compound for effectiveness in  
 CC altering expression of a target polynucleotide comprising (II), by  
 CC exposing a sample comprising the target polynucleotide to a compound,  
 CC detecting altered expression of the target polynucleotide, and comparing  
 CC the expression of the target polynucleotide in the presence of varying  
 CC amounts of compound and in the absence of the compound. (I) and (II) are  
 CC useful for diagnosis, treatment and prevention of cell proliferative  
 CC disorders (e.g. cancers, arteriosclerosis, atherosclerosis), neurological  
 CC disorders (e.g. epilepsy, stroke, schizophrenic disorders and  
 CC neuroskeletal disorders), cardiovascular disorders (e.g. hypertension,  
 CC ischaemic heart disease), gastrointestinal disorders (e.g. anorexia,  
 CC peptic ulcer), autoimmune/inflammatory disorders (e.g. diabetes mellitus,  
 CC osteoporosis, psoriasis), and metabolic disorders such as obesity.  
 CC Furthermore, the polynucleotide is useful; as primers for detecting  
 CC single nucleotide polymorphisms; as elements in microarray, to monitor or  
 CC measure protein-protein interactions, drug-target interactions, and gene  
 CC expression profiles; to generate a transcript image of a tissue or cell  
 CC type, and to generate hybridisation probes useful in mapping the  
 CC naturally occurring genomic sequence. This sequence encodes G-protein  
 CC coupled receptor 11, one of 21 GCREC proteins described in the method of  
 CC the invention

XX New polynucleotides encoding a polypeptide with biological activity,  
PT useful for treating inflammation, leukemias, nervous system disorders, or  
PT infections.  
XX Claim 1; SEQ ID NO 190; 253pp; English.  
XX The invention relates to a novel isolated polynucleotide comprising any  
CC of the 235 nucleotide sequences described in the specification. The  
CC invention further comprises: an isolated polynucleotide encoding a  
CC polypeptide with biological activity, where the polynucleotide hybridizes  
CC to one of the 235 novel polynucleotides under stringent hybridization  
CC conditions, or having greater than about 99% sequence identity with the  
CC novel polynucleotide; a vector comprising a novel polynucleotide; an  
CC expression vector comprising the novel polynucleotide; a host cell  
CC genetically engineered to comprise the novel polynucleotide, which can be  
CC operatively associated with a regulatory sequence that modulates  
CC expression of the polynucleotide in the host cell; an isolated  
CC polypeptide encoded by the novel polynucleotide, or a polynucleotide  
CC hybridizing under stringent conditions to the novel polynucleotide; a  
CC competition comprising the polypeptide and a carrier; an antibody  
CC directed against the polypeptide; a method for detecting the novel  
CC polynucleotide in a sample; a method for detecting the polypeptide in a  
CC sample; a method for identifying a compound that binds to the polypeptide  
CC ; a method for producing the polypeptide; an isolated polypeptide  
CC comprising any of the 235 amino acid sequences described in the  
CC specification; and a collection of polynucleotides comprising of at least  
CC one of the polynucleotides cited above. The polypeptides and  
CC polynucleotides of the invention have antinflammatory, cytostatic, and

CC antimicrobial activities. The novel polynucleotide may be used to treat  
 CC disorders by gene therapy. The polypeptides and polynucleotides are  
 CC useful for treating inflammation, leukaemias, nervous system disorders,  
 CC or infections. This sequence represents one of the 235 novel isolated  
 CC polynucleotides of the invention.

XX Claim 8; Page 11; 213pp; English.

XX ABN89112 to ABN89130 encoding the human G protein-coupled receptor  
 CC (GPCR) proteins given in ABB81440 to ABB81458. GPCR proteins can have  
 CC antiatherosclerotic, anorectic, antibacterial, fungicide, protozoacide,  
 CC virucide, analgesic, cytotatic, immunomodulator, metabolic, hypotensive,  
 CC antisthmatic, antiparkinsonian, hypertensive, osteopathic, anti-HIV,  
 CC antinflammatory, antinfertility, neuroprotective, antianigmal,  
 CC cardiant, antiulcer, antiallergic, nootropic, tranquiliser, hepatotropic,  
 CC antidepressant, antimanic, anticonvulsant, haemostatic, antiaddictive,  
 CC immunosuppressive, cerebroprotective, dermatological, antiaddictive,  
 CC nephrotropic and gynaecological activities, and can be used in vaccines  
 CC and gene therapy. GPCR proteins and polynucleotides can be used for  
 CC treating or preventing a GPCR-associated disorder such as  
 CC cardiomyopathy, atherosclerosis, a disorder related to cell signal  
 CC processing and metabolic pathway modulation, in a human. GPCR proteins  
 CC and polynucleotides can also be used in the manufacture of a medicament  
 CC for preventing or treating disorders or syndromes including developmental  
 CC diseases, cardiomyopathy, atherosclerosis, cancer, neurodegenerative  
 CC disorders, autoimmune disorders, infectious diseases and diabetes.  
 CC ABN89131 to ABN89187 represent PCR primers and probes used in the  
 CC exemplification of the present invention

XX New prostate specific polypeptides and polynucleotides useful for  
PT detecting, diagnosing, monitoring, treating, staging and predicting  
PT cancers in humans having cancer and non-cancerous prostate disease.  
XX  
XX Claim 1; Page 203-204; 267pp; English.

XX The invention describes an isolated prostate specific polypeptide (I) and  
XX nucleic acid (II) encoding it and are useful for diagnosing and  
XX monitoring the presence and metastases of prostate cancer in a patient.  
XX (I), (II) and an antibody to (II) are useful in quantitative and  
XX qualitative diagnostic assays and methods for detecting, diagnosing,  
XX monitoring, treating, staging and predicting cancer in humans having  
XX cancer or may have the risk of developing cancer. (I) and (II) are also  
XX useful for determining non-cancerous prostate disease, by measuring  
XX their expression levels and/or structural alterations; for determining  
XX the sample that has prostate tissue-like characteristics or is a prostate  
XX tissue; as an element in an array or a multi-analyte test to recognise  
XX expression patterns associated with prostate cancer and other prostate  
XX related disorders; and as elements in a computer program for pattern  
XX recognition of prostate disorders. (I) and (II) are useful for producing

CC engineered prostate tissue for treatment and research. (II) is useful for  
CC producing transgenic animals and cells and also in gene therapy. This  
CC sequence represents a prostate specific nucleic acid described in the  
CC invention

XX Novel G protein coupled receptor especially olfactory receptor

PT polypeptides and nucleic acids for diagnosing and treating

PT atherosclerosis, cardiomyopathy and diabetes.

XX Claim 8; Page 43; 309pp; English.

PS The invention describes an isolated G protein coupled receptor X (GPCR1-

XX 12) polypeptide, especially an olfactory receptor. GPCR polypeptides are

CC useful for identifying an agent that binds to the polypeptide and for

CC identifying a candidate substance or ligand molecules interacting with an

CC olfactory receptor polypeptide. The polypeptide, (I) and (II) are also

CC useful for treating diseases and disorders related to cell signal

CC processing and metabolic pathway modulation e.g. cardiomyopathy,

CC atherosclerosis and diabetes, and developmental diseases, immune

CC corticosteroid disease, signal transduction pathway disorders,

CC metabolic pathway disorders, retinal diseases, metabolic disorders,

CC obesity, infectious disease, pain, cancer, Parkinson's disease, acute

CC heart failure, urinary retention, osteoporosis, Crohn's disease, ulcers,

CC allergies, neurological disorders, genetic disorders, transplantation,

CC fertility, Pancreatitis, Hyperthyroidism and Endometriosis. GPCR

CC sequences are also useful for identifying a cell or tissue type in a

CC biological sample, to amplify DNA sequences from very small biological

CC samples such as tissues e.g. hair or skin or body fluids in forensic

CC biology. Cells comprising (I) are useful for producing non-human

CC transgenic animals for studying the function and/or activity of GPCR

CC protein and for identifying and/or evaluating modulators of GPCR protein

CC activity. This sequence encodes a novel G-protein coupled receptor

CC described in the invention

XX

CC The invention relates to human G protein coupled receptor (GPCR)

CC polypeptides and the polynucleotides encoding them. GPCR polypeptides are

CC useful for treating or preventing a GPCR-associated disorder which is

CC related to cell signalling processing and metabolic pathway modulation,

CC which includes cardiomyopathy and atherosclerosis in a human. The

CC sequences are useful in treatment of patients suffering from

CC developmental diseases, immune diseases, non insulin-dependent diabetes

CC mellitus (NIDDM1), bacterial, fungal, protozoal and viral infections

CC (e.g. infections caused by HIV), cancer (e.g. adenocarcinoma, lymphoma),

CC anorexia, asthma, neurodegenerative disorders (e.g. Parkinson's disease),

CC acute heart failure, hypotension, hypertension, osteoporosis, Crohn's

CC disease, multiple sclerosis, osteodystrophy, angina pectoris, myocardial

CC infarction, ulcers, allergies, neurological disorders including anxiety,

CC schizophrenia, manic depression, delirium, dementia, Huntington's

CC disease, Alzheimer's disease, Tourette's syndrome, metabolic disorders

CC and obesity. This sequence represents cDNA encoding a GPCR polypeptide of

CC the invention

XX
XX Claim 5; Page 171-172; 182pp; English.
XX
XX The present sequence is that of a cDNA clone, denoted Incyte
CC Polynucleotide ID No. 55153201CB1, encoding novel human G-protein coupled
CC receptor GCRC-6. The encoded protein is an olfactory receptor, being 73%
CC identical from residue 1 to 296 to a murine olfactory receptor, and
CC including a 7-transmembrane receptor (rhodopsin family) domain. The
CC invention provides GCRC-1 to -26 polynucleotides (see AB258224-49),
CC polypeptides (see ABP72207-32) and antibodies. These are useful for the
CC diagnosis, treatment or prevention of neural disorders of olfaction, cell
CC proliferative, neurological, cardiovascular, gastrointestinal,
CC autoimmune, inflammatory, and metabolic disorders, and viral infections.
CC They are also used in claimed methods of screening for agonist and
CC antagonist compounds, in treating a disease or condition associated with
CC decreased expression or overexpression of a functional GCRC, in
CC assessing the toxicity of a test compound, in the construction of a
CC microarray and generation of an expression profile, and in the
CC identification of a compound which modulates, mimics and/or blocks an
CC olfactory and/or taste sensation

(HUMA-) HUMAN GENOME SCI INC.
XX
PA
XX
```

```
PI Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-483426/52.
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides;
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX Disclosure; SEQ ID NO 23289; 3071pp + Sequence Listing; English.
XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patient's own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/hematopoietic-related diseases, especially
CC cancers and cancer metastases of hematopoietic-derived cells. AAK4703
CC to AAK87694 represent human immune/hematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

XX
PT Isolated nucleic acid molecule encoding a reproductive system antigen is
PT used in preventing, treating or ameliorating a medical condition.
XX
XX Disclosure; SEQ ID NO 6728; 1297pp + Sequence Listing; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human reproductive system related antigens. These can be used
CC in the prevention and treatment of reproductive system disorders,
CC including cancer. The present sequence is a genomic sequence encoding a
CC protein of the invention

XX SS The invention comprises the amino acid and coding sequences of human  
XX CC nucleic acid-associated proteins (NAAP). The DNA and protein sequences of  
XX CC the invention are useful in diagnosing, preventing and treating  
XX CC diseases/conditions associated with altered expression of NAAP, such as:  
XX CC autoimmune/inflammatory disorders (e.g. AIDS and allergies), infections  
XX CC (e.g. bacterial and viral), metabolic disorders (e.g. obesity),  
XX CC reproductive disorders (e.g. infertility), neurological disorders (e.g.  
XX CC Parkinson's disease and Alzheimer's disease), cardiovascular disorders  
XX CC (e.g. myocardial infarction and hypertension), eye disorders, or cell  
XX CC proliferative diseases (e.g. cancer). The present DNA sequence encodes a  
XX CC human NAAP protein of the invention.

XX WPI; 2004-593473/57.  
XX DR Classifying a breast cancer patient according to prognosis comprises  
XX PT determining the similarity between the level of expression of each of  
XX PT five genes in a cell sample taken from patient, to control levels.  
XX PS Disclosure; SEQ ID NO 1308; 226pp; English.  
XX CC The invention relates to a method of classifying a breast cancer patient  
XX CC according to prognosis by determining the similarity between the level of  
XX CC expression of each of five genes for which markers are listed in the  
XX CC specification, in a cell sample taken from the breast cancer patient, to  
XX CC control levels of expression for each respective five genes to obtain a  
XX CC patient similarity value. The methods are useful for classifying a breast  
XX CC cancer patient according to prognosis. Kits and computer program products  
XX CC are useful for data analysis using the diagnostic, prognostic and  
XX CC statistical methods of the invention. This sequence corresponds to a  
XX CC marker used in the method of the invention.

XX
XX Claim 9; Page 144-145; 150pp; English.
PS
XX
XX The present sequence is that of Incyte clone 1399169 encoding new human
CC protein regulating gene expression PRGE-27 (see AAY58634). The cDNA was
CC initially isolated from brain tumour cDNA library BRAITUT08, and the full
CC length sequence assembled from overlapping clones from a number of
CC libraries. PRGE-27 is expressed in haematopoietic/immune, reproductive
CC and gastrointestinal tissues associated with cell proliferative and
CC inflammation diseases, disorders or conditions. It is characterized as a
CC bromodomain protein. The invention provides PRGE polypeptides (see
CC AAY58608-38) and polynucleotides (see AAZ57839-69), expression vectors,
CC host cells, antibodies, agonists and antagonists. It also provides
CC methods for diagnosing, treating or preventing disorders associated with
CC expression of PRGE. Polynucleotides are also used as sources of probes
CC and primers for diagnosis and monitoring of disease, also for detecting
CC related sequences and in gene mapping

XX
XX Biomarkers useful for predicting or determining the response of a mammal
PT to a cancer treatment comprising administration of a modulator of cyclin-
PT dependent kinase activity.
XX
XX Claim 5; SEQ ID NO 504; 141pp; English.
PS
XX
XX This invention describes a novel method of predicting or determining
CC whether a mammal will respond or is responding to an anti-cancer agent
CC that modulates cyclin-dependent kinase (cdk) activity. The method
CC comprises measuring the level of one or more biomarkers selected from
CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC invention is utilized in a kit for determining or predicting whether
CC patient would be susceptible or resistant to treatment by an agent
CC modulating cdk activity. The invention also describes a method for
CC utilizing individualized genetic profiles for treating diseases and
CC disorders based on patient's response and molecular level, specialized
CC microarrays comprising the biomarkers described, antibodies directed
CC against the biomarkers and a cell culture model to identify biomarkers.
CC The cdk modulator is preferably N-5-[(5-(1,1-Dimethylethyl)-2-
CC oxazolyl)methylthio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC tartaric acid salt. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC sequence encodes a biomarker used in the method of the invention.

XX New diagnostic and therapeutic polynucleotides and polypeptides, useful  
PT in diagnosing a condition, disease or disorder associated with human  
PT molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or  
XX in gene mapping.  
PS Claim 1; Page; 190pp; English.  
XX The invention relates to novel diagnostic and therapeutic polynucleotides  
CC selected from one of the 2722 sequences defined in the specification. A  
CC polynucleotide of the invention may have a use in gene therapy. The human  
CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be  
CC used to diagnose a particular condition, disease or disorder associated  
CC with human molecules, e.g. cell proliferative disorders,  
CC autoimmune/inflammatory disorder, developmental disorder, endocrine  
CC disorder, neurological disorders, gastrointestinal disorders, or  
CC infections caused by virus, bacteria, fungi or parasite. The dithp  
CC molecules may also be used in genetic mapping, in identifying individuals  
CC from minute biological samples, in detecting single nucleotide  
CC polymorphisms, as molecular weight markers, and for somatic or germline  
CC gene therapy. The present sequence represents a dithp polynucleotide of  
CC the invention. Note: the sequence data for this patent is not represented  
CC in the printed specification, but was obtained in electronic format  
CC directly from WIPO at [www.wipo.int/pct/en/sequences/listing.htm](http://www.wipo.int/pct/en/sequences/listing.htm)

XX New 1995 cDNA, useful for treating osteoporosis, neurological diseases,  
PT Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.  
XX  
PS Claim 1; SEQ ID NO 1350; 2686pp; English.  
XX This invention relates to novel, isolated full length human cDNA  
CC molecules and the encoded proteins thereof. Specifically, it refers to  
CC cDNA clones obtained by an oligo-capping method, where none of these  
CC clones are identical to any known human mRNAs. The present invention  
CC describes an immunoassay to identify agonists and antagonists, as well as  
CC antibodies, antisense molecules and siRNAs that can all be used to bind  
CC to and modulate expression of the cDNA molecules. As such, these  
CC molecules are useful for diagnostic markers or therapeutic targets for  
CC the various diseases or morbid states. In particular, they are useful in  
CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's  
CC disease, Parkinson's disease, dementia, short memory and various cancers,  
CC as well as for maintaining equilibrium of sense or motor function, and  
CC for treating emotional reaction, fear response and panic. Accordingly,  
CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,  
CC cyostatic and tranquilliser activities. This polynucleotide is a full  
CC length human cDNA sequence of the invention. NOTE: This sequence is not  
CC given in the sequence listing of the specification but can be obtained on  
CC CD-ROM from the European Patent Office, Vienna Sub-office.

XX ABZ73281-ABZ73697 represent cDNAs corresponding to 391 human secreted protein genes, and ABP00947-ABP01363 represent the proteins they encode.  
CC  
CC ABZ73698-ABZ74687 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening and recombinant vectors and host cells comprising a nucleic acid of the invention. The secreted proteins are thought to be involved in biological activities associated with cellular signalling, cellular differentiation, cell migration, prohormone activation and neurotransmitter activity. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing or treating cancers or other

CC	hyperproliferative disorders. Additionally, the secreted proteins and
CC	their nucleic acids may also be used in the treatment of autoimmune
CC	disorders, inflammatory disorders, diseases involving angiogenesis, AIDS
CC	(acquired immunodeficiency syndrome), hepatitis, anaemia, and to promote
CC	wound healing. Nucleic acids of the invention may be used for chromosome
CC	identification, chromosome mapping, in gene therapy, for identifying
CC	individuals from minute biological samples, as hybridisation probes, and
CC	as molecular weight markers. The present sequence represents a human
CC	secreted protein genomic fragment referred to in the disclosure of the

XX PI Rosen CA, Ruben SM;  
XX PT WPI; 2003-040583/03.  
XX DR New human secreted proteins encoded by genes contained in cDNA clones  
PT (e.g. HGAC19), useful for preventing, treating or diagnosing e.g. AIDS,  
PT multiple sclerosis, herpes virus, leukemia, tick-borne encephalitis or  
PT West Nile fever.  
XX PS Disclosure; Page 1804-1814; 2423pp; English.  
XX CC The invention relates to novel human genes (ABZ66891-ABZ68209) and the  
CC encoded secreted proteins (ABP99470-ABP99872) useful for preventing,  
CC treating or ameliorating medical conditions e.g. by protein or gene  
CC therapy. The genes are isolated from a range of human tissues disclosed  
CC in the specification. The nucleic acids, proteins, antibodies and  
CC (ant)agonists are useful in the diagnosis, treatment and prevention of:  
CC (a) cancer, e.g. breast and ovarian cancer and other cancers of the  
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,  
CC lung or urogenital; (b) immune disorders e.g. Addison's disease,  
CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,  
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid  
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as  
CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.  
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,  
CC bacterial, fungal and parasitic infections

Division of Experimental Animal Research in Riken contributed to  
prepare mouse tissues.

Tissues were provided by Michela Fagiolini and Takao K. Hensch ( Laboratory for Neuronal Circuit Development Brain Science Institute  
RIKEN 2-1 Hirosawa, Wako-shi, Saitama 351-0198 Japan ) whose  
assistance we gratefully acknowledge.

Please visit our web site (<http://genome.gsc.riken.go.jp>) for  
further details.

This sequence is from a Xenopus Gene Collection (XGC) library

constructed by Aaron M. Zorn.

cDNA was oligo dt primed from sug of poly A+ RNA from stages 10-13  
gastrulae. EcoRI-NotI cut cDNA was then ligated into pCS107 with  
EcoRI at the 5' end and NotI at the 3' end.

Vector: pCS107; Site\_1: EcoRI; Site\_2: NotI

Host: Escherichia coli XLI-blue

Sanger Xenopus tropicalis EST project 2001

Sanger Xenopus tropicalis EST project 2001

TROPICALIS\_SEQUENCE\_ID: Tegg044013.q1kT7

This sequence is from a Xenopus Gene Collection (XGC) library

constructed by Aaron M. Zorn.

cDNA was oligo dt primed from 5' of poly A+ RNA from egg.

EcoRI-NotI cut cDNA was then ligated into pCS107 with EcoRI at the

5' end and NotI at the 3' end.

Vector: pCS107; Site 1: EcoRI; Site 2: NotI

Host: Escherichia coli XL1-Blue.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

[illegible]

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

JOURNAL  
Submitted (29-JAN-2005) Human Genome Sequencing Center, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Jan 28, 2005 this sequence version replaced gi:57334844.

Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

-----  
 During sequence assembly data is compared from overlapping clones.  
 Where differences are found these are annotated as variations  
 together with a note of the overlapping clone name. Note that the  
 variation annotation may not be found in the sequence submission  
 corresponding to the overlapping clone, as we submit sequences with  
 only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all  
 regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >=  
 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one plasmid subclone or more than one M13 subclone; and the  
 assembly was confirmed by restriction digest, except on the rare  
 occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession  
 numbers given in the feature table with their source databases:  
 En:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information  
 on the WORMPEP database can be found at

http://www.sanger.ac.uk/Projects/C\_elegans/wormpep/IMPORTANT: This  
 sequence is not the entire insert of clone XX-15E1 It may be  
 shorter because we sequence overlapping sections only once, except  
 for a short overlap.

The true left end of clone RP1-75N14 is at 55991 in this sequence.  
 The true right end of clone XX-166H1 is at 1098 in this sequence.

LOCUS AL353812 129794 bp DNA linear PRI 18-MAY-2005
DEFINITION Human DNA sequence from clone RP11-384D7 on chromosome 20 Contains
the 5' end of the C20orf22 for chromosome 20 open reading frame 22
(DKFZp434P106), the PPIAP2 gene for peptidylprolyl isomerase A
(cyclophilin A) pseudogene 2, the 5' end of the gene for a novel
protein (K1AA0186) and three CpG islands, complete sequence.

## JOURNAL

## COMMENT

Direct Submission  
Submitted (24-AUG-2002) Whitehead Institute/MIT Center for Genome  
Research, 320 Charles Street, Cambridge, MA 02141, USA  
On Apr 8, 2000 this sequence version replaced gi:6715815.  
All repeats were identified using RepeatMasker:  
Smit, A.F.A. & Green, P. (1996-1997)  
<http://ftp.genome.washington.edu/RM/RepeatMasker.html>

----- Genome Center

Center: Whitehead Institute/ MIT Center for Genome Research

Center code: WIBR

Web site: <http://www-seq.wi.mit.edu>

----- Project Information

Center project name: L5690

Center clone name: 777\_M\_5

----- Summary Statistics

Sequencing vector: M13; M7815; 100% of reads

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.960731

Consensus quality: 138398 bases at least Q40

Consensus quality: 145295 bases at least Q30

Consensus quality: 147783 bases at least Q20

Insert size: 171000; agarose-fp

Insert size: 150305; sum-of-contigs

Quality coverage: 3.8 in Q20 bases; agarose-fp

Quality coverage: 4.3 in Q20 bases; sum-of-contigs

-----

\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 34 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

\* 1 1357: contig of 1357 bp in length  
\* 1358 1457: gap of 100 bp  
\* 1359 2566: contig of 1109 bp in length  
\* 2567 2666: gap of 100 bp  
\* 2667 3828: contig of 1162 bp in length  
\* 3829 3929: gap of 100 bp  
\* 3929 5158: contig of 1229 bp in length  
\* 5158 5257: gap of 100 bp  
\* 5257 6995: contig of 1738 bp in length  
\* 6995 7095: gap of 100 bp  
\* 7095 8163: contig of 1068 bp in length  
\* 8163 8263: gap of 100 bp  
\* 8263 9738: contig of 1475 bp in length  
\* 9738 9839: gap of 100 bp  
\* 9839 12015: contig of 2177 bp in length  
\* 12015 12115: gap of 100 bp  
\* 12115 14153: contig of 2038 bp in length  
\* 14153 14253: gap of 100 bp  
\* 14253 14254 15947: contig of 1694 bp in length

\* 15948 16047: gap of 100 bp  
\* 16048 17790: contig of 1743 bp in length  
\* 17791 17890: gap of 100 bp  
\* 17891 20931: contig of 3041 bp in length  
\* 20932 21031: gap of 100 bp  
\* 21032 24518: contig of 3487 bp in length  
\* 24519 24619: gap of 100 bp  
\* 24619 27964: contig of 3346 bp in length  
\* 27965 28064: gap of 100 bp  
\* 28065 30904: contig of 2740 bp in length  
\* 30905 34188: contig of 3284 bp in length  
\* 34189 34288: gap of 100 bp

Primer A: No sequence submitted

Primer B: No sequence submitted

STS size: 601

Protocol:

WGS-discovery (WGS):

paired-end and low-coverage whole genome shotgun reads were generated from 9 breeds (German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador Retriever, English Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese Water Dog -100,000 each) and five other canids (Chinese, Alaskan, Indian and Spanish Gray Wolf as well as the Californian Coyote).

The WGS reads were placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 863872 reads were annotated as STSs and 45941 SNPs were annotated with alleles from the boxer and the breed or canid from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.

WGA-discovery (WGA) of Boxer/Poodle SNPs: A second set of SNPs was generated using a similar methodology except that the contigs from the 1.5x poodle assembly (Kirkness 2003) were used instead of WGS reads. Since this sequence lacked base quality scores, arbitrary quality scores of phred 40 were assigned before the poodle sequence was placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated with alleles from the boxer and the poodle. The validation rate for these SNPs was estimated at approximately TBD%.

Internal-WGA-discovery (I-WGA): A third set of SNPs were discovered by comparing reads in the WGA assembly. SNPs were defined as mismatch positions that had a base quality of  $\geq 30$  on both reads in a region that aligned without gaps, and with at most one additional mismatch in the ten flanking bases. For each allele, at least one additional read had to confirm it. 731476 SNPs were annotated with alleles between the two boxer alleles. The validation rate for these SNPs was estimated at approximately TBD%.

-----  
\* NOTE: This record contains 71 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

-----

\* NOTE: This record contains 79 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

COMMENT Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,  
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk  
Clone requests: clonerequest@sanger.ac.uk  
On Sep 13, 2001 this sequence version replaced gi:14970334.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:  
 Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at  
<http://www.sanger.ac.uk/projects/C-elegans/wormpep> This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at  
<http://www.sanger.ac.uk/HGP/Chr10>  
 RP11-269L3 is from the library RP11-11.1 constructed by the group of Pieter de Jong. For further details see  
<http://www.choi.org/bacpac/home.htm>  
 VECTOR: pBACe3.6

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

 ----- Project Information  
 Center project name: gnt  
 Center clone name: 371122

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig, has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is generally based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

#### ----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads  
 Chemistry: Dye-terminator Big Dye; 100% of reads  
 Assembly program: Phrap; version 0.990319  
 Consensus quality: 133035 bases at least Q40  
 Consensus quality: 133354 bases at least Q30  
 Consensus quality: 133486 bases at least Q20  
 Insert size: 152000; agarose-1p  
 Insert size: 133531; sum-of-contigs  
 Quality coverage: 10.18x in Q20 bases; agarose-fp  
 Quality coverage: 11.59x in Q20 bases; sum-of-contigs

----- NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 8 contigs. Gaps between the contigs  
 \* are represented as runs of N. The order of the pieces  
 \* is believed to be correct as given, however the sizes  
 \* of the gaps between them are based on estimates that have  
 \* provided by the submitter.  
 \* This sequence will be replaced  
 \* by the finished sequence as soon as it is available and  
 \* the accession number will be preserved.  
 \* 1 26879: contig of 26879 bp in length  
 \* 26880 26979: gap of unknown length  
 \* 26980 29523: contig of 2544 bp in length  
 \* 29524 29623: gap of unknown length  
 \* 29624 67124: contig of 37401 bp in length  
 \* 67025 67124: gap of unknown length  
 \* 67125 92702: contig of 25578 bp in length  
 \* 92703 92802: gap of unknown length  
 \* 92803 95901: contig of 3099 bp in length  
 \* 95902 96001: gap of unknown length  
 \* 96002 100291: contig of 4290 bp in length  
 \* 100292 100391: gap of unknown length  
 \* 100392 129050: contig of 28659 bp in length  
 \* 129051 129150: gap of unknown length  
 \* 129151 134231: contig of 5081 bp in length.

----- Summary Statistics
Sequencing vector: M13; M77815; 47% of reads
Sequencing vector: plasmid; n/a; 53% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 188836 bases at least Q40
Consensus quality: 189476 bases at least Q30
Consensus quality: 189595 bases at least Q20
Insert size: 188000; agarose-fp
Insert size: 189663; sum-of-contigs
Quality coverage: 10.7 in Q20 bases; agarose-fp
Quality coverage: 10.7 in Q20.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 4 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Rat Genome Sequencing Consortium.

Direct Submission

Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 9, 2003 this sequence version replaced gi:24818682.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information

Center project name: GAWW

Center Clone name: CH230-4p9

----- Summary Statistics

Assembly program: Atlas

Consensus quality: 197283 bases at least Q40

Consensus quality: 202460 bases at least Q30

Consensus quality: 206455 bases at least Q20

Estimated insert size: 211719; sum-of-contigs estimation

Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

-----

\* NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/genbank\_draft\_data.html).  
\* NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence. \* as soon as it is available and the accession number will be preserved.

\* 1 242724: contig of 242724 bp in length  
\* 242725 242824: gap of unknown length  
\* 242825 243872: contig of 1048 bp in length  
\* 243873 243972: gap of unknown length  
\* 243973 245076: contig of 1104 bp in length  
\* 245077 245176: gap of unknown length  
\* 245177 246315: contig of 1139 bp in length.

Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

**SOURCE INFORMATION:**  
The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The clone and detailed information can be obtained from ResGen (<http://www.resgen.com>) or Pieter de Jong and co-workers at <http://www.bacpac.chori.org>.

**NEIGHBORING SEQUENCE INFORMATION:**  
This sequence is the entire insert of the clone. This clone is overlapped by AC140950.

Center project name: C\_PT031L17

**NOTICE:**  
This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate  
chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by sequence  
from more than one subclone; and the assembly was confirmed by  
restriction digest.

**MAPPING INFORMATION:**  
Mapping information for this clone was provided by Dr. Wes Warren,

Consensus quality: 164740 bases at least Q20

\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 33 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

5': RP11-102G17 (UWGC:djs267) AC078842, 133761-bp overlap  
3': RP11-181K7 (UWGC:djs270) AC009517, 4307-bp clone overlap  
-----  
Sequence Quality Assessment:  
This entry has been annotated with sequence quality  
estimates computed by the Phrap assembly program.  
All manually edited bases have been reduced to quality zero.  
Quality levels above 40 are expected to have less than  
1 error in 10,000 bp.  
Base-by-base quality values are not generally visible from the  
GenBank flat file format but are available as part  
of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:  
all regions were either double-stranded or sequenced with an  
alternate chemistry or covered by high quality data (i.e., Phred  
quality >= 30); an attempt was made to resolve all sequencing  
problems, such as compressions and repeats; all regions were  
covered by at least one plasmid subclone or more than one M13  
subclone; and the assembly was confirmed by restriction digest.  
-----  
Sequence Validation:  
This sequence has been validated by Multiple Complete Digest  
fingerprinting. Comparison of the experimentally derived digest  
fragments with sequence-predicted fragments is given below.  
The electronically-digested sequence consists of both insert and  
vector, in order to accurately represent the entire circular BAC.  
Small fragments below a variable cutoff (approximately 400-800 bp)  
are not resolved in the fingerprint and hence do not appear  
in the table. There are no significant remaining discrepancies  
between the experimental and predicted values. Uniquely ordered  
fragments are separated by dashed lines.

----- Summary Statistics  
Center project name: C\_PT058122  
-----

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:  
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:  
The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The clone and detailed information can be obtained from ResGen (<http://www.resgen.com>) or Pieter de Jong and co-workers at <http://www.bacpac.chori.org>.

NEIGHBORING SEQUENCE INFORMATION:  
This sequence is the entire insert of the clone.

-----

\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 16 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

Sasaki, T., Matsumoto, T. and Yamamoto, K.  
Submitted (18-APR-2001) Takuji Sasaki, National Institute of  
Agrobiological Sciences, Rice Genome Research Program; Kannondai  
2-1-2, Tsukuba, Ibaraki 305-8602, Japan  
(E-mail: tsasaki@nias.affrc.go.jp, URL: http://rgp.dna.affrc.go.jp/,  
Tel: 81-298-38-7441, Fax: 81-298-38-7468)  
On Aug 24, 2004 this sequence version replaced gi:46849600.  
Genes were predicted from the integrated results of the following:  
GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH  
(http://www.softberry.com/), GeneMark.hmm  
(http://opal.biology.gatech.edu/GeneMark/), Glimmer-M  
(http://www.tigr.org/tdb/glimmer/glmr\_form.html), RiceHMM  
(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor  
(http://bioinformatics.iastate.edu/cgi-bin/sp.cgi), sim4  
(http://globin.cse.psu.edu/html/docs/sim4.html), gap2  
(http://www.tigr.org/software/glimmer/), BLASTN and BLASTX. The  
genomic sequence was searched against NCBI Nonredundant Protein  
database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA  
sequence database at RGP or DDBJ. Protein homologues of the coding  
regions were searched against NCBI Nonredundant Protein database  
with BLASTP. ESTs represent the identified cDNA sequences using  
BLASTN with the corresponding DDBJ accession no. and RGP clone ID.  
Full-length cDNAs represent the identified cDNA sequences using  
BLASTN with the corresponding DDBJ accession no.  
A gene with identity or significant homology to a protein is  
classified based on the protein name to indicate the homology level  
such as same name, 'putative-' and '-like protein'. A gene without  
significant homology to any protein but with full-length cDNA or  
EST homology (covering almost the entire length of partial  
sequence) is classified as an 'unknown' protein. A gene predicted  
by two or more gene prediction programs is classified as a  
'hypothetical' protein according to RGP standard. A gene  
predicted by a single gene prediction program is also classified as  
a probable 'hypothetical' protein and is included as a  
miscellaneous feature of the sequence.  
The orientation of the sequence is from M13rev to -21M13 of the BAC  
clone. This sequence of OSUNBa0062J02 clone has an overlap with  
OJ1226\_A12 (DDBJ: AP004008) clone at 5' end and with P0453H04

AP004334 101607 bp DNA linear  
Oryza sativa (japonica cultivar-group) genomic DNA, chromosome 7,  
PAC clone:P0455H11.

AP004334 GI:21203158

Oryza sativa (japonica cultivar-group)  
Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;  
Spermatophyta; Magnoliophyta; Liliopsida; Poales; Poaceae;  
Ehrhartoideae; Oryzaceae; Oryza.

1 Sasaki,T., Matsumoto,T. and Yamamoto,K.

Oryza sativa nipponbare (G3) genomic DNA, chromosome 7, PAC

clone:P0455H11

Published Only in Database (2001)

2 (bases 1 to 101607)

Sasaki,T., Matsumoto,T. and Yamamoto,K.

Direct Submission

Submitted (14-NOV-2001) Takuji Sasaki, National Institute of

Agrobiological Sciences, Rice Genome Research Program; Kannondai

2-1-2, Tsukuba, Ibaraki, 305-8602, Japan

(E-mail:tsasaki@ias.affrc.go.jp, URL:<http://rgp.dna.affrc.go.jp/>,  
Tel:81-298-38-7441, Fax:81-298-38-7468)

On May 24, 2002 this sequence version replaced gi:16930119.

Genes were predicted from the integrated results of the following:

GENSCAN (<http://CCR-081.mit.edu/GENSCAN.html>), FGENSEH

(<http://www.softberry.com/>), GeneMark.hmm

(<http://opal.biology.gatech.edu/GeneMark/>), GlimmerM

(<http://opal.biology.gatech.edu/glimmer/glmr form.html>), RiceHMM

(<http://rgp.dna.affrc.go.jp/RiceHMM/>), SplicePredictor

(<http://bioinformatics.iastate.edu/cgi-bin/sp.cgi>), sim4

(<http://globin.cse.psu.edu/html/docs/sim4.html>), gap2

(<http://www.tigr.org/software/glimmer/>), BLASTN and BLASTX. The

genomic sequence was searched against NCBI NonRedundant Protein

database, nr (<ftp://ncbi.nlm.nih.gov/blast/db>) and the cDNA

sequence database at RGP or DDBJ. Protein homologues of the coding

regions were searched against NCBI NonRedundant Protein database

with BLASTP. ESTs represent the identified cDNA sequences using

BLASTN with the corresponding DDBJ accession no. and RGP clone ID.

Full-length cDNAs represent the identified cDNA sequences using

BLASTN with the corresponding DDBJ accession no.

A gene with identity or significant homology to a protein is

classified based on the protein name to indicate the homology level

such as same name, 'putative', and '-like protein'. A gene without

significant homology to any protein but with full-length cDNA or

EST homology (covering almost the entire length of partial

sequence) is classified as an 'unknown' protein. A gene predicted

by two or more gene prediction programs is classified as a

'hypothetical' protein according to IRGSP standard. A gene

predicted by a single gene prediction program is also classified as

a probable 'hypothetical' protein and is included as a

miscellaneous feature of the sequence.

The orientation of the sequence is from T7 to SP6 of the PAC clone.

This sequence of P0455H11 clone has an overlap with P0519E12

clone (DDBJ: AP004339) at 5' end and an overlap with OJ1332\_C12

clone (DDBJ: AP003752) at 3' end. Detailed information on overlap

and assembly quality together with annotation of this entry is

available at

<http://rgp.dna.affrc.go.jp/GenomeSeq.html>.

Sequence Produced by Berkeley PGA  
 Web site: <http://pga.lbl.gov>  
 Center Code: PGABERK  
 Center Project Name: F072  
 Bac Clone Name: MRC-195B17

This sequence has been compared to sequences of other species  
 using Vista (<http://www-gsd.lbl.gov/VISTA>). The results can be  
 viewed at:  
[http://pga.lbl.gov/cgi-bin/search\\_cvcgd?type=n&value=PTK7](http://pga.lbl.gov/cgi-bin/search_cvcgd?type=n&value=PTK7)

The order-orientation of the draft sequence was accomplished by using:  
Avid (<http://baboon.math.berkeley.edu/mavid>) and paired end information.

Funding agent: Programs for Genomic Applications (NHLBI)

#### Summary Statistics:

Sequencing vector: Plasmid; pUC18

Chemistry: Dye-terminator Big Dye

Assembly program: Phrap version 0.990329.

\* NOTE: This is a 'working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs

\* are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes

\* of the gaps between them are based on estimates that have

\* provided by the submitter.

\* This sequence will be replaced

\* by the finished sequence as soon as it is available and

\* the accession number will be preserved.

\* 1 111804: contig of 111804 bp in length.

\* Location/Qualifiers

#### COMMENT

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

#### ANNOTATION OF FEATURES:

STGs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: <http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

## NOTICE:

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone, fosmid clone or direct clone walk sequence. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to obtain the consensus sequence; and the assembly was confirmed by restriction digest.

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

## SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at <http://www.chori.org>

## NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

```

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

```

----- Summary Statistics
Sequencing vector: plasmid, n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 129301 bases at least Q40
Consensus quality: 129516 bases at least Q30
Consensus quality: 129643 bases at least Q20
Insert size: 129000; agarose-fp
Insert size: 129668; sum-of-contigs
Quality coverage: 10.58x in Q20 bases; agarose-fp

```

Quality coverage: 10.52x in Q20 bases; sum-of-contigs

-----  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 4 contigs. Gaps between the contigs  
 \* are represented as runs of N. The order of the pieces  
 \* is believed to be correct as given, however the sizes  
 \* of the gaps between them are based on estimates that have  
 \* provided by the submittor.  
 \* This sequence will be replaced  
 \* by the finished sequence as soon as it is available and  
 \* the accession number will be preserved.  
 \* 1 6330: contig of 6330 bp in length  
 \* 6331 6430: gap of unknown length  
 \* 6431 9836: contig of 3406 bp in length  
 \* 9837 9936: gap of unknown length  
 \* 9937 122751: contig of 112815 bp in length  
 \* 122752 122851: gap of unknown length  
 \* 122852 122968: contig of 7117 bp in length.

NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA
was isolated from white blood cells obtained from a male chimpanzee
(Pan troglodytes, Clint, Yerkes #C0471; birthdate: 6-6-80). The
clone and detailed information can be obtained from Resgen
(http://www.resgen.com) or Pieter de Jong and co-workers at
http://www.bacpac.chori.org.

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

XX (GENE-) GENE LOGIC INC.  
XX Beazer-Barclay Y, Weissman SM, Yamaga S, Vockley J;  
XX WPI; 2002-435328/46.  
XX Detecting granulocyte activation by detecting differential expression of  
XX genes associated with granulocyte activation, which serves as diagnostic  
XX markers that is useful for monitoring disease states and drug toxicity.  
XX Claim 1; SEQ ID NO 134; 114pp; English.  
XX The invention relates to detecting (M1) granulocyte (GC) activation  
XX (GCA), by detecting the level of expression of gene(s) (Gs) identified by  
XX DNA chip analysis as given in the specification, and comparing the  
XX expression level to an expression level in an unactivated GC, where  
XX differential expression of Gs is indicative of GCA. Also included are  
XX modulating (M2) GCA by contacting GC with an agent that alters the  
XX expression of at least one gene in Gs; (2) screening (M3) for an agent  
XX capable of modulating GCA or an inflammation (especially chronic) in a  
XX tissue, an allergic response in a subject, exposure of a subject to a  
XX pathogen or sterile inflammatory disease using the gene expression  
XX profile; (3) detecting (M4) an inflammation (especially chronic) in a  
XX tissue, an allergic response in a subject, exposure of a subject to a  
XX pathogen or sterile inflammatory disease, by detecting the level of  
XX expression in a sample of the tissue of gene(s) from Gs, where the level  
XX of expression of the gene is indicative of inflammation; (4) treating  
XX (M5) an inflammation (especially chronic) or in a tissue, an allergic  
XX response in a subject, exposure of a subject to a pathogen or sterile  
XX inflammatory disease, by contacting a tissue having inflammation with an  
XX agent that modulates the expression of gene(s) from Gs in the tissue. M1  
XX is useful for detecting GCA; M2 is useful for modulating GCA; M3 is useful  
XX for screening an agent capable of modulating GCA preferably in an  
XX inflammation in a tissue; M4 is useful for detecting an inflammation  
XX (especially chronic) in a tissue, an allergic response in a subject,  
XX exposure of a subject to a pathogen or sterile inflammatory disease (e.g.  
XX psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,  
XX cardiac reperfusion injury, renal reperfusion injury, ARDS, adult  
XX respiratory distress syndrome, inflammatory bowel disease, Crohn's  
XX disease, ulcerative colitis, periodontal disease; also bacterial  
XX infection, viral infection, parasitic infection, protozoal infection,  
XX fungal infection and M5 is useful for treating one of the above  
XX conditions. The present sequence represents a gene differentially  
XX expressed in granulocytes. Note: The sequence data for this patent did  
XX not form part of the printed specification, but was obtained in  
XX electronic format directly from WIPO at  
XX ftp.wipo.int/pub/published\_pct\_sequences

XX  
CC The invention relates to an isolated nucleic acid comprising at least 10  
CC contiguous nucleotides of any of the 233 polynucleotide sequences given  
CC in the specification, or its complement. The nucleic acids encode cancer-

CC associated proteins. Also included are an expression vector comprising  
CC the isolated nucleic acid cited above, a host cell comprising the above  
CC recombinant nucleic acid or expression vector, a microarray for detecting  
CC a cancer-associated (CA) nucleic acid comprising at least one probe  
CC comprising at least 10 contiguous nucleotides of any of the above-  
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within  
CC an open reading frame of a CA sequence selected from any of the 95  
CC polynucleotide sequences as mentioned in the specification, or its  
CC complement), an isolated antibody, (or its antigen binding fragment) that  
CC binds to the above polypeptide, a hybridoma that produces the above  
CC monoclonal antibody, a pharmaceutical composition comprising the above  
CC antibody and a pharmaceutical excipient, a kit for detecting cancer  
CC cells (comprising the antibody cited above, methods for diagnosing cancer  
CC or for detecting the presence or absence of cancer cells in an  
CC individual, a method for inhibiting growth of cancer cells in an  
CC individual, a method for delivering a therapeutic agent to cancer cells  
CC in an individual, an electronic library comprising the above  
CC polynucleotide or polypeptide (or their fragments), methods of screening  
CC for anticancer activity or for a bioactive agent capable of modulating  
CC the activity of a CA protein (CAP), methods for detecting cancer,  
CC associated with expression of a polypeptide in a test cell sample, a  
CC method for treating cancers and a method for inhibiting the expression of  
CC CA gene in a cell. The composition and methods are useful for detecting,  
CC diagnosing, preventing and treating cancers, especially lymphoma and  
CC leukaemia. These may also be used in screening for agents that modulate  
CC cancer. The present sequence is a human CAP genomic sequence. Note: The  
CC sequence data for this patent did not form part of the printed

XX Screening for anti-neoplastic agent involves exposing cells to a chemical  
PT agent to be tested for anti-neoplastic activity, and determining a change  
PT in expression of a gene of a signature gene set.  
XX  
XX Claim 1; SEQ ID NO 1071; 44pp; English.  
XX  
XX The present invention describes a method (M1) for screening for an anti-  
CC neoplastic agent. The method involves exposing cells to a chemical agent  
CC to be tested for anti-neoplastic activity, determining a change in  
CC expression of at least one gene (I) of a signature gene set, where (I)  
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664  
CC to ABL70110), or is at least 95% identical to (S), where a change in  
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic  
CC activity and can be used in gene therapy. M1 can be used for screening an  
CC anti-neoplastic agent, and can be used for producing a product which is  
CC the data collected with respect to the anti-neoplastic agent as a result  
CC of M1, and the data is sufficient to convey the chemical structure and/or  
CC properties of the agent. M1 can be used in the treatment of cancer such  
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,  
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell  
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous  
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilms'  
CC tumour

XX  
PT Early detection of soft tissue sarcoma comprises determining expression  
PT of a gene in a first soft tissue sample and a normal soft tissue sample  
PT and comparing the gene expression, also useful in treating soft tissue  
PT sarcoma.  
XX  
XX Example 2; SEQ ID NO 4899; 210pp; English.  
XX  
XX The invention relates to a novel method for detecting soft tissue sarcoma  
CC which comprises obtaining a first soft tissue sample from an individual  
CC and a normal soft tissue sample from the same or different individual,  
CC determining the expression of a gene in both samples and comparing the  
CC expression of the gene in both soft tissue samples, where a higher level  
CC of protein expression in the first soft tissue sample indicates the  
CC presence of soft tissue sarcoma. The method of the invention has  
CC cytostatic applications and may be useful for detecting soft tissue  
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic  
CC acid sequences may be useful in diagnostic and screening applications.  
CC The current sequence is that of a human soft tissue sarcoma-upregulated  
CC DNA of the invention. The current sequence is not shown within the  
CC specification per se but was submitted in CD format by the inventor.

XX New isolated nucleic acid molecule that encodes a plant protein or its  
PT fragment, useful for isolating a variety of agronomically significant  
PT genes associated with plant growth, quality or yield, and as molecular  
PT tags to map genes.  
XX  
XX Claim 1; SEQ ID NO 17315; 34pp; English.  
XX  
XX The invention relates to 17880 cotton expressed sequence tags (ESTs;  
CC ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated  
CC from primed or non-primed seeds from variety DP50B, mature seeds from  
CC variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium  
CC tissue, developing fibres, carpel walls and septa from variety  
CC Nutcoton33B. The invention also relates to substantially purified  
CC proteins or their fragments encoded by nucleic acid molecules of the  
CC invention, and to transformed plants having a nucleic acid construct  
CC comprising a nucleic acid of the invention. The cotton ESTs are useful as  
CC molecular tags to isolate genetic regions, to isolate genes, to map  
CC genes, to determine gene function, and to determine whether genes are  
CC members of a particular gene family. The nucleic acid molecules may be  
CC used for isolating a variety of agronomically significant genes  
CC associated with plant growth, quality, yield, and could also serve as  
CC links in metabolic and catabolic pathways. The nucleic acid molecules are  
CC also useful for identifying genes important in initiating and maintaining  
CC seed germination or that may be used to mitigate stresses encountered  
CC during seed germination. The ESTs additionally enable the acquisition of  
CC promoters and cis-regulatory elements which will be useful to express  
CC agronomically significant genes in these tissues and/or other tissues,  
CC and also permits the acquisition of molecular markers useful in breeding  
CC schemes, genetic and molecular mapping, and in cloning of agronomically  
CC significant genes. The nucleic acid molecules are further useful for  
CC detecting the expression level or pattern of a protein or mRNA and for  
CC detecting the presence or quantity of a protein by tissue printing. The  
CC present sequence represents a specifically claimed EST isolated from a  
CC cotton variety Nutcoton33B developing fibre cDNA library (LIB3830). The  
CC sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from the US  
CC patent office at seqdata.uspto.gov/sequence.html?DocID=US20040123340

CC The invention relates to an isolated nucleic acid comprising any one of

CC the 6213 antisense sequences given in the specification where expression

CC of the nucleic acid inhibits proliferation of a cell. Also included are:

CC (1) a vector comprising a promoter operably linked to the nucleic acid

CC encoding a polypeptide whose expression is inhibited by the antisense

CC nucleic acid; (2) a host cell containing the vector; (3) an isolated

CC polypeptide or its fragment whose expression is inhibited by the

CC antisense nucleic acid; (4) an antibody capable of specifically binding

CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular

CC proliferation or the activity of a gene in an operon required for

CC proliferation; (7) identifying a compound that influences the activity of

CC the gene product or that has an activity against a biological pathway;

CC required for proliferation, or that inhibits cellular proliferation; (8)

CC identifying a gene required for cellular proliferation or the biological

CC pathway in which a proliferation-required gene or its gene product lies

CC or a gene on which the test compound that inhibits proliferation of an

CC organism acts; (9) manufacturing an antibiotic; (10) profiling a

CC compound's activity; (11) a culture comprising strains in which the gene

CC product is overexpressed or underexpressed; (12) determining the extent

CC to which each of the strains is present in a culture or collection of

CC strains; or (13) identifying the target of a compound that inhibits the

CC proliferation of an organism. The antisense nucleic acids are useful for

CC identifying proteins or screening for homologous nucleic acids required

CC for cellular proliferation to isolate candidate molecules for rational

CC drug discovery programs, or for screening homologous nucleic acids

CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target

CC prokaryotic essential genes. Note: The sequence data for this patent did

CC not form part of the printed specification, but was obtained in

CC electronic format directly from WIPO at

PT pests, for conferring increased resistance to plant disease, or for  
PT improving yield.  
XX  
XX Claim 1; SEQ ID NO 3974; 15pp; English.  
XX  
XX The invention describes a recombinant DNA construct comprising a

CC polynucleotide consisting of a sequence encoding an amino acid sequence  
CC available in electronic form from the US patent office at  
CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide  
CC of the invention are also useful in physical arrays of molecules and as  
CC plant breeding markers. The recombinant DNA construct is useful for  
CC improving plant tolerance to cold, heat, drought, herbicides, extreme  
CC osmotic conditions, pathogens or pests, for manipulating growth rate in  
CC plant cells by modification of the cell cycle pathway, for conferring  
CC increased resistance to plant disease, for producing galactomanan,  
CC lignin or plant growth regulators, for increasing the rate of homologous  
CC recombination in plants, for improving yield by modification of  
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
CC or by providing improved plant growth and development under at least one  
CC stress condition or for modifying seed oil or protein yield and/or  
CC content. This sequence represents a plant full length insert  
CC polynucleotide that can be used in the recombinant DNA construct of the  
CC invention.

XX  
XX The invention relates to an isolated nucleic acid comprising at least 10  
CC contiguous nucleotides of any of the 233 polynucleotide sequences given  
CC in the specification, or its complement. The nucleic acids encode cancer-  
CC associated proteins. Also included are an expression vector comprising

CC the isolated nucleic acid cited above, a host cell comprising the above  
CC recombinant nucleic acid or expression vector, a microarray for detecting  
CC a cancer-associated (CA) nucleic acid comprising at least one probe  
CC comprising at least 10 contiguous nucleotides of any of the above-  
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within  
CC an open reading frame of a CA sequence selected from any of the 95  
CC polynucleotide sequences as mentioned in the specification, or its  
CC complement), an isolated antibody, (or its antigen binding fragment) that  
CC binds to the above polypeptide, a hybridoma that produces the above  
CC monoclonal antibody, a pharmaceutical composition comprising the above  
CC antibody and a pharmaceutical excipient, a kit for detecting cancer  
CC cells (comprising the antibody cited above, methods for diagnosing cancer  
CC or for detecting the presence or absence of cancer cells in an  
CC individual, a method for inhibiting growth of cancer cells in an  
CC individual, a method for delivering a therapeutic agent to cancer cells  
CC in an individual, an electronic library comprising the above  
CC polynucleotide or polypeptide (or their fragments), methods of screening  
CC for anticancer activity or for a bioactive agent capable of modulating  
CC the activity of a CA protein (CAP), methods for detecting cancer  
CC associated with expression of a polypeptide in a test cell sample, a  
CC method for treating cancers and a method for inhibiting the expression of  
CC CA gene in a cell. The composition and methods are useful for detecting,  
CC diagnosing, preventing and treating cancers, especially lymphoma and  
CC leukaemia. These may also be used in screening for agents that modulate  
CC cancer. The present sequence is a mouse CAP genomic sequence. Note: The  
CC sequence data for this patent did not form part of the printed  
CC specification, but was obtained in electronic format directly from WIPO

 XX New IKBKAP genes with mutations, useful for identifying a subject with  
 PT familial dysautonomia (FD), or for rapid carrier screening in the  
 PT Ashkenazi Jewish population, e.g. screening presymptomatic homozygotes or  
 PT prenatal diagnosis.  
 XX  
 XX Claim 1; Page; 109pp; English.  
 XX  
 CC The present invention relates to methods and compositions useful for  
 CC detecting mutations which cause Familial Dysautonomia (FD, Riley-Day  
 CC syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) [OMIM  
 CC 223900]. It was found that mutations in the IKBKAP gene (see ABQ80565)  
 CC are associated with FD. The mutation associated with the major haplotype  
 CC of FD, FD1 mutation, is a base pair (bp) mutation, where the thymine  
 CC nucleotide located at bp 6 of intron 20 in the IKBKAP gene is replaced  
 CC with a cytosine. This results in skipping of exon 20 in the mRNA from FD  
 CC patients, although they continue to express varying levels of wild-type  
 CC message in a tissue-specific manner. The mutation associated with the  
 CC minor haplotype, FD2 mutation, is a bp mutation, where the guanine  
 CC nucleotide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine.  
 CC This bp mutation causes an arginine to proline missense mutation (R696P)  
 CC in the IKBKAP protein, which is predicted to disrupt a potential  
 CC phosphorylation site. The IKBKAP nucleic acid sequences are useful for  
 CC identifying a subject with FD and for rapid carrier screening. The IKBKAP  
 CC gene contains 37 exons and maps to chromosome 9q31. Note: the present  
 CC sequence was not shown in the specification, but was derived from the  
 CC human wild-type IKBKAP sequence given in Fig 6

 CC are associated with FD. The mutation associated with the major haplotype  
 CC of FD, FD1 mutation, is a base pair (bp) mutation, where the thymine  
 CC nucleotide located at bp 6 of intron 20 in the IKBKAP gene is replaced  
 CC with a cytosine. This results in skipping of exon 20 in the mRNA from FD  
 CC patients, although they continue to express varying levels of wild-type  
 CC message in a tissue-specific manner. The mutation associated with the  
 CC minor haplotype, FD2 mutation, is a bp mutation, where the guanine  
 CC nucleotide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine.  
 CC This bp mutation causes an arginine to proline missense mutation (R696P)  
 CC in the IKBKAP protein, which is predicted to disrupt a potential  
 CC phosphorylation site. The IKBKAP nucleic acid sequences are useful for  
 CC identifying a subject with FD and for rapid carrier screening. The IKBKAP  
 CC gene contains 37 exons and maps to chromosome 9q31. Note: the present  
 CC sequence was not shown in the specification, but was derived from the  
 CC human wild-type IKBKAP sequence given in Fig 6

PT familial dysautonomia (FD), or for rapid carrier screening in the  
PT Ashkenazi Jewish population, e.g. screening presymptomatic homozygotes or  
PT prenatal diagnosis.  
XX Claim 1; Page; 109pp; English.  
XX  
CC The present invention relates to methods and compositions useful for  
CC detecting mutations which cause Familial Dysautonomia (FD, Riley-Day  
CC syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) [OMIM  
CC 223900]. It was found that mutations in the IKBKAP gene (see AB080565)  
CC are associated with FD. The mutation associated with the major haplotype  
CC of FD, FDI mutation, is a base pair (bp) mutation, where the thymine  
CC nucleotide located at bp 6 of intron 20 in the IKBKAP gene is replaced  
CC with a cytosine. This results in skipping of exon 20 in the mRNA from FD  
CC patients, although they continue to express varying levels of wild-type  
CC message in a tissue-specific manner. The mutation associated with the  
CC minor haplotype, FD2 mutation, is a bp mutation, where the guanine  
CC nucleotide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine.  
CC This bp mutation causes an arginine to proline missense mutation (R696P)  
CC in the IKBKAP protein, which is predicted to disrupt a potential  
CC phosphorylation site. The IKBKAP nucleic acid sequences are useful for  
CC identifying a subject with FD and for rapid carrier screening. The IKBKAP  
CC gene contains 37 exons and maps to chromosome 9q31. Note: the present  
CC sequence was not shown in the specification, but was derived from the

XX Claim 1; Fig 6; 109pp; English.  
XX  
CC The present invention relates to methods and compositions useful for  
CC detecting mutations which cause Familial Dysautonomia (FD, Riley-Day  
CC syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) [OMIM  
CC 223900]. It was found that mutations in the IKBKAP gene (the present  
CC sequence) are associated with FD. The mutation associated with the major  
CC haplotype of FD, FDI mutation, is a base pair (bp) mutation, where the  
CC thymine nucleotide located at bp 6 of intron 20 in the IKBKAP gene is  
CC replaced with a cytosine. This results in skipping of exon 20 in the mRNA  
CC from FD patients, although they continue to express varying levels of  
CC wild-type message in a tissue-specific manner. The mutation associated  
CC with the minor haplotype, FD2 mutation, is a bp mutation, where the  
CC guanine nucleotide at bp 2397 (bp 73 of exon 19) is replaced with a  
CC cytosine. This bp mutation causes an arginine to proline missense  
CC mutation (R696P) in the IKBKAP protein, which is predicted to disrupt a  
CC potential phosphorylation site. The IKBKAP nucleic acid sequences are  
CC useful for identifying a subject with FD and for rapid carrier screening.  
CC The IKBKAP gene contains 37 exons and maps to chromosome 9q31

PT producing plants with increased tolerance to these abiotic stresses.  
XX  
XX Claim 144; SEQ ID NO 3818; 577pp + Sequence Listing; English.  
XX  
XX The invention relates to identifying a stress condition to which a plant  
CC cell has been exposed, comprising: (a) contacting nucleic acid  
CC representative of expressed polynucleotides in the plant cell with an  
CC array or probes representative of the plant cell genome; and (b)  
CC detecting a profile of expressed polynucleotides in the plant cell  
CC characteristic of a stress response. The method is useful in the  
CC production of transgenic plants, cells and seeds and in producing plants  
CC with increased tolerance to abiotic stress. The present sequence is that  
CC of an Arabidopsis thaliana stress regulated gene (AB212196-AB217574) used  
CC in methods of the invention. Note: The sequence data for this patent is  
CC not represented in the printed specification but is based on sequence  
CC information supplied to Derwent by the European Patent Office

PT pathogenic infection for conferring resistance or tolerance to a plant to  
PT bacterial, fungal or viral infection by determining or detecting plant  
PT gene expression.  
XX  
XX Claim 27; SEQ ID NO 2445; 899pp; English.  
XX  
XX The present invention relates to a method (M1) for identifying genes  
CC involved in plant resistance or response to pathogenic infection. M1  
CC comprises identifying a gene whose expression is significantly altered in  
CC the incompatible interaction of plant gene expression relative to  
CC expression of the gene in an uninfected plant, in a mutant plant that  
CC does not express a gene associated with response to pathogenic infection,  
CC or in a corresponding incompatible or compatible interaction. (M1) is  
CC useful for conferring resistance to resistance or tolerance to a plant to  
CC bacterial, fungal or viral infection. The present sequence was used to  
CC illustrate the invention.

XX New human secretory proteins and polynucleotides, useful for diagnosing,  
PT treating or preventing autoimmune/inflammatory disorders (e.g. AIDS),  
PT neurological disorders (e.g. Alzheimer's), or cell proliferations or  
PT cancers.  
XX Claim 1; SEQ ID NO 365; 459pp + Sequence Listing; English.  
XX  
XX The invention relates to a secretory polynucleotide (designated sptm)  
CC comprising any of 567 polynucleotide sequences (AB235837-AB236403), a  
CC naturally occurring polynucleotide sequence at least 90 % identical to  
CC the polynucleotide sequence, a polynucleotide complementary to them or an  
CC RNA equivalent of them. The polypeptide or polynucleotide are useful for  
CC treating, preventing or diagnosing a disease or condition associated with  
CC the expression of functional SPTM. These are particularly useful for  
CC diagnosing, treating or preventing autoimmune/inflammatory disorders  
CC (e.g. acquired immunodeficiency syndrome, anaemia, asthma or Crohn's  
CC disease), neurological disorders (e.g. epilepsy, Huntington's disease,  
CC dementia, stroke, Alzheimer's disease, Creutzfeldt-Jakob disease,  
CC multiple sclerosis, cerebral palsy, Parkinson's disease, anxiety,  
CC schizophrenia or amnesia), or cell proliferative disorders (e.g.  
CC psoriasis, polycythemia vera, or cancers including adenocarcinoma,  
CC leukaemia, lymphoma, melanoma, myeloma, sarcoma or cancers of the brain,  
CC breast, cervix or prostate). Note: The sequence data for this patent did  
CC not form part of the printed specification, but was obtained in electronic  
CC format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX  
XX The invention relates to 446 newly isolated polynucleotide sequences. The  
CC activity of polynucleotides of the invention may be described as,  
CC inflammatory, neuroprotective, immunomodulator, cytostatic and anti-  
CC cancer. Compositions comprising nucleic acids of the invention are  
CC useful for treating a mammalian subject, or as nutritional sources or  
CC supplements. These are useful in gene therapy, particularly for treating  
CC wounds, burns or ulcers, Alzheimer's disease, Huntington's disease,  
CC amyotrophic lateral sclerosis, autoimmune disorders, cancer or

CC inflammation. The nucleic acids and polypeptides are also useful in  
CC diagnostic and research methods. The sequences given in records ABQ60788-  
CC ABQ61233 represent polynucleotides of the invention. NOTE: The sequence  
CC data for this patent did not form part of the printed specification, but  
CC was obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

XX  
XX Early detection of soft tissue sarcoma comprises determining expression  
PT of a gene in a first soft tissue sample and a normal soft tissue sample  
PT and comparing the gene expression, also useful in treating soft tissue  
PT sarcoma.  
XX  
XX Example 2; SEQ ID NO 6853; 210pp; English.  
XX  
XX The invention relates to a novel method for detecting soft tissue sarcoma  
CC which comprises obtaining a first soft tissue sample from an individual  
CC and a normal soft tissue sample from the same or different individual,  
CC determining the expression of a gene in both samples and comparing the  
CC expression of the gene in both soft tissue samples, where a higher level  
CC of protein expression in the first soft tissue sample indicates the  
CC presence of soft tissue sarcoma. The method of the invention has  
CC cytostatic applications and may be useful for detecting soft tissue  
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic  
CC acid sequences may be useful in diagnostic and screening applications.  
CC The current sequence is that of a human soft tissue sarcoma-upregulated  
CC DNA of the invention. The current sequence is not shown within the  
CC specification per se but was submitted in CD format by the inventor.

 XX New isolated polynucleotides, which are differentially expressed in colon  
 PT cancer cell, useful for treating cancer, e.g. colon cancer, breast  
 PT cancer, or pancreatic cancer.  
 PT  
 XX Claim 1; SEQ ID NO 3035; 97pp; English.  
 PS  
 XX The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which  
 CC are differentially expressed in colon cancer cells. The invention also  
 CC relates to vectors and host cells comprising a differentially expressed  
 CC polynucleotide of the invention; a method for detecting a cancerous cell  
 CC by detection of a gene product of the polynucleotides; a method for  
 CC inhibiting a cancerous phenotype of a cell by inhibiting a gene product  
 CC of the polynucleotides; a method of treating an individual with cancer by  
 CC administration of a modulator of a gene product of the polynucleotides;  
 CC and an isolated antibody that specifically binds to a polypeptide encoded  
 CC by one of the 9672 polynucleotides. The polynucleotides, polypeptides,  
 CC antibodies, and methods are useful for the detection of cancerous cells;  
 CC for the diagnosis, prognosis and management of cancer; for the  
 CC identification of agents that modulate the phenotype of cancerous cells;  
 CC for the identification of therapeutic targets for cancer chemotherapy;  
 CC and for the treatment of cancer, especially colon cancer and metastasized  
 CC colon cancer, but also breast or pancreatic cancer. The polynucleotides  
 CC are also useful as a source of probes or primers for use in diagnostic  
 CC methods. The differentially expressed polynucleotides or their encoded  
 CC proteins can additionally be used as vaccines to modulate primary immune  
 CC responses for the prevention or treatment of cancer. The present sequence  
 CC represents a specifically claimed polynucleotide which is differentially  
 CC expressed in colon cancer. Note: The sequence data for this patent did  
 CC not form part of the printed specification, but was obtained in  
 CC electronic format directly from WIPO at

 XX New nucleic acid associated with lactation, and muscle and fat  
 PT deposition, useful for genome mapping, gene identification and analysis,  
 PT cattle breeding, or for genetically improving cattle.  
 PT  
 XX Claim 2; SEQ ID NO 835; 245pp; English.  
 XX  
 CC The invention relates to a purified nucleic acid molecule associated with  
 CC lactation or muscle and fat deposition (designated LMFD), derived from  
 CC cattle, and the LMFD nucleic acid can specifically hybridize to a second  
 CC nucleic acid molecule comprising any of 15112 nucleotide sequences,  
 CC appearing as ABX34836-ABX49947, or complements of them. Also included are  
 CC ; (1) a transformed cell having a nucleic acid comprising an LMFD nucleic  
 CC acid linked to a promoter and a 3' non-translated sequence that  
 CC functions in the cell to cause termination of transcription and addition  
 CC of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and  
 CC (2) determining a level or pattern of a molecule in a bovine cell or  
 CC tissue comprising: (a) incubating a marker nucleic acid (comprising any  
 CC of the 15112 nucleic acid sequences or its complement or fragment) with a  
 CC complementary nucleic acid molecule obtained from the bovine cell or  
 CC tissue, where hybridisation between the marker nucleic acid and the  
 CC complementary nucleic acid permits the detection of the molecule; and (b)  
 CC detecting the level or pattern of the complementary nucleic acid, where  
 CC the detection of the complementary nucleic acid is predictive of the  
 CC level or pattern of the molecule. The LMFD nucleic acid is used for  
 CC determining a level or pattern of a molecule in a bovine cell or tissue.  
 CC It is useful for genome mapping, gene identification and analysis, cattle  
 CC breeding, preparation of constructs for use in cattle gene expression, or  
 CC for genetically improving cattle. The present sequence is one of the  
 CC 15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The  
 CC present sequence was not shown in the specification but was obtained in  
 CC electronic format from the USPTO web site:

XX  
XX Nucleic acids encoding 4277 human colon cancer-associated polypeptides,  
XX useful for preventing, diagnosing and/or treating colorectal cancers.  
XX  
XX Claim 1; Page 2666; 9803pp; English.  
XX  
XX AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon  
XX cancer-associated nucleic acid molecules (N) and proteins (P), where the  
XX proteins are collectively known as colon cancer antigens. The colon  
XX cancer antigens have cytostatic activity and can be used in gene therapy  
XX and vaccine production. N and P may be used in the prevention, diagnosis  
XX and treatment of diseases associated with inappropriate P expression. For  
XX example, N and P may be used to treat disorders associated with decreased  
XX expression by rectifying mutations or deletions in a patient's genome  
XX that affect the activity of P by expressing inactive proteins or to  
XX supplement the patient's own production of P. Additionally, N may be used  
XX to produce the colon cancer-associated Ps, by inserting the nucleic acids  
XX into a host cell and culturing the cell to express the proteins. N and P  
XX can be used in the prevention, diagnosis and treatment of colorectal  
XX carcinomas and cancers. AAH37196 to AAH37204 and AAG77789 represent  
XX sequences used in the exemplification of the present invention. N.B.  
XX Pages 666 to 682 and page 7053 of the sequence listing were missing at  
XX time of publication, meaning no sequences are present for SEQ ID NO:1027  
XX to 1052, 7921 and 7922

XX  
XX Novel human genes and their expression products which are differentially  
XX expressed in different cell types.  
XX  
XX Claim 1; Page 1561; 2479pp; English.  
XX  
XX The present invention describes a library of human polynucleotides  
XX comprising the sequences given in AAZ1532 to AAZ1779. Also described is  
XX a method of detecting differentially expressed genes correlated with the  
XX cancerous state of a mammalian cell, comprising detecting at least one  
XX differentially expressed gene product in a test sample from a cell  
XX suspected of being cancerous, where the gene product is encoded by one of  
XX the 5248 polynucleotide sequences given in AAZ1532 to AAZ1779. The  
XX polynucleotides can be used as a source of primers and probes, which can  
XX be used for a variety of purpose, e.g. detection of expression levels,  
XX mapping, tissue typing or profiling, forensics, genetic analysis and  
XX detection of polymorphisms. Polypeptides encoded by the polynucleotides  
XX can be used for raising antibodies for experimental, diagnostic and  
XX therapeutic purposes. The polynucleotides may also be used to construct  
XX arrays for diagnostics (which may be used to determine function of an  
XX encoded protein); and to detect differences in expression levels between  
XX two cells (e.g. to identify abnormal or diseased tissue in a human, to  
XX identify a genetic predisposition or susceptibility to a disease such as  
XX cancer). The polynucleotides of the invention are especially used in the  
XX diagnosis, prognosis and management of colorectal cancer, breast cancer,  
XX and lung cancer. The polynucleotides can also be used to screen for  
XX peptide analogues and antagonists

PT Novel gene useful for preparing a composition for reducing or inhibiting
PT viral infection or for suppressing a malignant phenotype in a cell.
XX
XX
PS Claim 1; SEQ ID NO 265; 662pp; English.
XX
XX
CC This invention relates to novel mammalian genes involved in viral
CC infection and tumour suppression. Specifically, it refers to methods for
CC identifying cellular genes that are required for viral, bacterial or
CC parasitic growth, as well as genes used for tumour progression, but that
CC are not essential for cell survival. The present invention describes a
CC 'gene trap' method and screening/selection process that can isolate
CC those polynucleotides that are associated with a specific process of
CC interest. Furthermore, this method relies on the core discovery that
CC virally infected cells become dependent on a serum survival factor that
CC does not affect non-infected cells. Accordingly, identification of these
CC factors and the appropriate inhibitors thereof, provides a means to treat
CC and/or prevent viral, bacterial or parasitic growth and infection, as
CC well as tumour growth. The compositions of this invention exhibit
CC cytostatic, virucidal, antibacterial and antiparasitic activities. This
CC polynucleotide is a rat CDNA sequence that is necessary for viral
CC infection, given in an exemplification of the invention.

PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT pests, for conferring increased resistance to plant disease, or for
PT improving yield.
XX
XX
PS Claim 1; SEQ ID NO 22701; 15pp; English.
XX
XX
CC The invention describes a recombinant DNA construct comprising a
CC polynucleotide consisting of a sequence encoding an amino acid sequence
CC available in electronic form from the US patent office at
CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This sequence represents a plant full length insert
CC polynucleotide that can be used in the recombinant DNA construct of the
CC invention.

XX
XX Claim 88; Page 170-171; 173pp; English.
XX
XX The invention relates to human enzymes designated NZMS and nucleic acid
CC molecules encoding such proteins. Sequences of the invention are useful
CC for diagnosing, treating or preventing disorders associated with aberrant
CC expression of NZMS. The disorders treated include cell proliferative
CC disorders such as hepatitis, psoriasis, cancer (e.g. leukaemia),
CC autoimmune disorders such as diabetes, acquired immune deficiency
CC syndrome (AIDS), cardiovascular disorders such as arteriosclerosis,
CC hypertension), gastrointestinal disorders (e.g. anorexia, gastritis),
CC neurological disorders (e.g. epilepsy, dementia), pulmonary disorders
CC (e.g. embolism, asthma), reproductive or eye disorders. Polypeptides of
CC the invention is useful in a number of drug screening techniques and to
CC analyse the proteome of a tissue or cell type. They are also useful as
CC elements on a microarray. Polynucleotides of the invention are useful for
CC creating knockin humanised animals or transgenic animals to model human
CC diseases, in somatic or germline gene therapy, to generate a transcript
CC image of a tissue or cell type, for detecting difference in the
CC chromosomal location due to translocation or inversion among normal,
CC carrier or affected individuals and as hybridisation probes for mapping
CC naturally occurring genomic sequences. The present sequence is human NZMS

PT New isolated polypeptide useful for diagnosing and treating  
PT immunosuppressive conditions such as autoimmune disease and Parkinson's  
PT disease.  
XX

XX Claim 3; SEQ ID NO 161; 345pp; English.

XX The invention relates to an isolated polypeptide. The polypeptide is  
CC useful for diagnosing a pathological condition or a susceptibility to a  
CC pathological condition in a subject, by determining the presence or  
CC amount of expression of the polypeptide in a biological sample and  
CC diagnosing a pathological condition or a susceptibility to a pathological  
CC condition based on the presence or amount of expression of the  
CC polypeptide. The polypeptide is also useful for identifying a binding  
CC partner to the polypeptide, which involves contacting the polypeptide  
CC with a binding partner and determining whether the binding partner  
CC effects an activity of the polypeptide. The polypeptide or the nucleic  
CC acid encoding the polypeptide is useful for preventing, treating, or  
CC ameliorating a medical condition, which involves administering the  
CC polypeptide or the nucleic acid to a mammalian subject. The nucleic acid  
CC is useful for diagnosing a pathological condition or a susceptibility to  
CC a pathological condition in a subject, which involves determining the  
CC presence or absence of a mutation in the nucleic acid, and diagnosing a  
CC pathological condition or susceptibility to a pathological condition  
CC based on the presence or absence of the mutation. The polypeptide, the  
CC nucleic acid and an antibody to the polypeptide are useful for treating  
CC autoimmune disease, Parkinson's disease, silicosis, gastrointestinal  
CC disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide,  
CC the nucleic acid and the antibody are useful as immunosuppressive agents,  
CC as adjuvants to enhance immune responses, and as agents to induce higher  
CC affinity antibodies and increase serum immunoglobulin concentrations. The  
CC present sequence represents cDNA encoding a novel human protein. Note:  
CC The sequence data for this patent did not form part of the printed  
CC specification but was obtained in electronic format direct from USPTO at  
CC seqdata.uspto.gov/sequence.html?DocID=20020168711.

XX
XX The invention relates to the human RNA helicase 9 and the encoding
CC polynucleotide with cytostatic, virucidal, immunomodulatory,
CC antiinflammatory and haemostatic activity. The polypeptide and encoded
CC polynucleotide are applicable in diagnosis and treatment of malignant
CC neoplasm, haemopathy, HIV infection, immunological diseases, various
CC inflammations, cancer and nervous system diseases

XX New mouse nucleic acid molecules and polypeptides, useful for treating
PT cancer, psoriasis, ulcerative colitis, inflammation, ischemic heart
PT disease or thrombosis.
XX
XX Claim 1; SEQ ID NO 269; 263pp; English.
XX
XX The invention comprises 744 novel mouse DNA sequences (genes). The DNA
CC sequences of the invention are useful for treating cancer, psoriasis,
CC ulcerative colitis, inflammation, ischaemic heart disease, thrombosis,
CC immune disorders, bacterial disorders and viral disorders. The present
CC nucleic acid represents a mouse DNA sequence of the invention. NOTE: The
CC present DNA sequence is not shown in the specification, but has been
XX retrieved from the WIPO website.

XX
PS Claim 4; SEQ ID NO 1; 330pp; English.
XX
CC The invention relates to a novel isolated protein comprising a fully
CC defined sequence of 892 amino acids given in the specification, an
CC allelic variant or an orthologue of the protein and/or a fragment of the
CC protein. A protein of the invention has cytostatic activity, and may have
CC a use in gene therapy. The protein or nucleic acid molecule encoding it
CC is useful as a model for the development of human therapeutic targets,
CC aids in the identification of therapeutic proteins, serve as targets for
CC the development of human therapeutic agents that modulate transporter
CC activity in cells and tissues that express the transporter, or in
CC pharmacogenomic analysis. The protein may be used in substantial and
CC specific assays, in raising antibodies or in eliciting another immune
CC response, as a reagent in assays designed to quantitatively determine the
CC levels of the protein in biological fluids, and as markers for tissues in
CC which the protein is expressed. The nucleic acid molecules may be used as
CC probes, primers, chemical intermediates and in biological assays. These
CC may also be used in diagnosing, preventing or treating disorders
CC associated with human transporter protein, such as tumours. The present
CC sequence encodes the human transporter protein of the invention.

XX

XX New isolated NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders, e.g. obesity, cancer, Parkinson's disease, infections, immune disorders, or various dyslipidaemias.

XX

XX Example 12; Page 122; 461pp; English.

XX

XX The invention relates to an isolated polypeptide comprising any of the 36 86-1370 residue amino acid sequences, given in the specification, a mature form of them, or a sequence that is at least 95 % identical to, or

CC

CC having one or more conservative amino acid substitutions in one of the 36 amino acid sequences. The polypeptides, nucleic acid molecules and antibodies of the invention are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The nucleic acid molecules, polypeptides and antibodies are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obesity, infectious diseases (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer, Parkinson's disease, neurodegenerative disorders, Alzheimer's disease, cancer and various dyslipidaemias, or metabolic disturbances associated with obesity, metabolic X syndrome, and wasting disorders. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. This polynucleotide represents a NOVX related DNA sequence of the invention

 PS Claim 20; SEQ ID NO 29; 322pp; English.  
 XX  
 CC The invention describes a new polypeptide comprising: any of the 36 fully  
 CC defined amino acid sequences (e.g. 860, 919 or 681 amino acids) given in  
 CC the specification; a mature form of (a); a sequence that is at least 95%  
 CC identical to (a); or a sequence comprising one or more conservative  
 CC substitutions in (a). The polypeptide is useful in the manufacture of a  
 CC medicament for treating a syndrome associated with a human disease, the  
 CC disease selected from a pathology associated with the polypeptide. These

CC may also be used in diagnosing, treating or preventing NOVX-associated  
 CC disorders such as cardiomyopathy, atherosclerosis, hypertension,  
 CC scleroderma, obesity, cancer, diabetes, haemophilia, graft-versus-host  
 CC disease, AIDS, asthma, Crohn's disease, multiple sclerosis, infections,  
 CC anorexia, cancer-associated cachexia, neurodegenerative disorders (e.g.  
 CC Alzheimer's disease or Parkinson's disease), haematopoietic disorders  
 CC dyslipidemias and other wasting disorders associated with chronic  
 CC diseases. The nucleic acids are also used as hybridisation probes, in  
 CC chromosome mapping, tissue typing, preventive medicine, and  
 CC pharmacogenomics. The polypeptides are also useful as vaccines. This  
 CC sequence encodes a novel human polypeptide of the invention.

XX PT condition by contacting a specimen from the individual with an ARP15
XX PT binding agent that selectively binds an ARP15 polypeptide.
XX PS Claim 134; Page 210-214; 227pp; English.
XX CC The invention relates to diagnosing or predicting susceptibility to a
XX CC prostate neoplastic condition. The method involves (a) contacting a
XX CC specimen from the individual with an androgen responsive prostate
XX CC specific (ARP)15 binding agent that selectively binds an ARP15
XX CC polypeptide; (b) determining a test expression level of ARP15 polypeptide
XX CC in the specimen; and (c) comparing the test expression level to a non-
XX CC neoplastic control expression level of ARP15 polypeptide, where an
XX CC altered test expression level as compared to the control expression level
XX CC indicates the presence of a prostate neoplastic condition in the
XX CC individual. The method is useful for diagnosing or predicting
XX CC susceptibility to a prostate neoplastic condition or for treating or
XX CC reducing severity of a prostate neoplastic condition. The present
XX CC sequence represents a human ARP30 polypeptide encoding cDNA

P-PSDB; ADQ74869.
New substantially pure androgen responsive specific nucleic acid, useful
for diagnosing and treating prostate cancer.
Claim 148; SEQ ID NO 21; 102pp; English.
The invention relates to human androgen responsive prostate specific
(ARP) polynucleotides and the polypeptides they encode. The invention
also relates to a method of diagnosing or predicting susceptibility to a
prostate neoplastic condition in an individual and a method for treating
or reducing the severity of a prostate neoplastic condition in an
individual. The polynucleotides, polypeptides and methods of the
invention are useful for diagnosing and treating prostate cancer. This
sequence represents a human ARP polynucleotide of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT
1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen.

The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones that display the same hybridisation matrix with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
clone per ONFP cluster was selected for sequencing. cDNA clones and
filters are distributed via Deutsches Ressourcenzentrum fuer
Genomforschung GmbH (http://www.rzpd.de).

TITLE Direct Submission  
JOURNAL Submitted (02-JUN-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)  
COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila

melanogaster BAC library was prepared by Kazutoyo Oosagawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw 9p, the same strain used for the BDGP's pi and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at [http://bacpac.med.buffalo.edu/drosophila\\_bac.htm](http://bacpac.med.buffalo.edu/drosophila_bac.htm).

OM nucleic - nucleic search, using sw model

Run on: February 3, 2006, 11:35:31 ; Search time 343.111 Seconds  
(without alignments)  
61.064 Million cell updates/sec

Title: US-10-719-900-5

Perfect score: 25

Sequence: 1 aaaaacaatgacaaactgggctgt 25

Scoring table: IDENTITY NUC

Gapop 10.0 , Gapext 1.0

Searched: 6068529 seqs, 41903697 residues

Total number of hits satisfying chosen parameters: 12137058

Minimum DB seq length: 0

Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%

Maximum Match 100%

Listing first 150 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

## COMMENT

University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA  
On Mar 26, 2003 this sequence version replaced gi:24943072.  
----- Genome Center  
Center: Washington University Genome Sequencing Center  
Center code: WUGSC  
Web site: <http://genome.wustl.edu>  
Contact: [submissions@watson.wustl.edu](mailto:submissions@watson.wustl.edu)  
----- Summary Statistics  
Center project name: M\_BA0282P01  
-----

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

## SOURCE INFORMATION:

The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateno in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

## NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

	-----	
	* NOTE: This is a 'working draft' sequence. It currently	
	* consists of 3 contigs. The true order of the pieces	

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

#### MAPPING INFORMATION:

The position of this clone was established as part of a collaboration between the Chimpanzee Chromosome Y Mapping Project (Jennifer F. Hughes, Tatyana Pyntikova, Helen Skaletsky, Steve Rozen, and David C. Page at the Whitehead Institute for Biomedical Research, Cambridge MA) and the Washington University Genome Sequencing Center, St. Louis MO.

#### SOURCE INFORMATION:

The RP43 BAC library has been constructed by Chung-Li Shu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The clone and detailed information can be obtained from ResGen (<http://www.resgen.com>) or Pieter de Jong and co-workers at <http://www.bacpac.chori.org>.

#### NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

-----

#### NOTICE:

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

#### MAPPING INFORMATION:

The position of this clone was established as part of a collaboration between the Chimpanzee Chromosome Y Mapping Project (Jennifer F. Hughes, Tatyana Pyntikova, Helen Skaletsky, Steve Rozen, and David C. Page at the Whitehead Institute for Biomedical Research, Cambridge MA) and the Washington University Genome Sequencing Center, St. Louis MO.

#### SOURCE INFORMATION:

The CHORI-251 Chimpanzee BAC library has been constructed at the Children's Hospital Oakland Research Institute, BACPAC Resources, by Dr. Baoli Zhu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The clone and detailed information can be obtained from Pieter de Jong and co-workers at <http://www.bacpac.chori.org>.

#### NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is overlapped by AC147127 and AC146455.

----- Project Information
Center project name: etm
Center clone name: 204N10

The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8X average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associated
with a Phrap-derived quality score.
----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 196374 bases at least Q40
Consensus quality: 196562 bases at least Q30
Consensus quality: 196601 bases at least Q20
Insert size: 185000; agarose-fp
Insert size: 196620; sum-of-contigs
Quality coverage: 10.83x in Q20 bases; agarose-fp
Quality coverage: 10.19x in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently

```

```

* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* the accession number will be 196620 bp in length.

TITLE	Direct Submission
JOURNAL	Submitted (23-JAN-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT	On Jan 23, 2005 this sequence version replaced gi:55058582. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas ( <a href="http://www.hgsc.bcm.tmc.edu/projects/rat/">http://www.hgsc.bcm.tmc.edu/projects/rat/</a> ). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence

may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Rat Genome Sequencing Consortium.

Direct Submission

Submitted (08-OCT-2002) Human Genome Sequencing Center, Department

of Molecular and Human Genetics, Baylor College of Medicine, One

Baylor Plaza, Houston, TX 77030, USA

On Sep 23, 2002 this sequence version replaced gi:21745909.

The sequence in this assembly is a combination of BAC based reads

and whole genome shotgun sequencing reads assembled using Atlas

(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described

in the feature table below represents a scaffold in the Atlas

assembly (a 'contig-scaffold'). Within each contig-scaffold,

individual sequence contigs are ordered and oriented, and separated

by sized gaps filled with Ns to the estimated size. The sequence

may extend beyond the ends of the clone and there may be sequence

contigs within a contig-scaffold that consist entirely of whole

genome shotgun sequence reads. Both end sequences and whole genome

shotgun sequence only contigs will be indicated in the feature

table.

Direct Submission
Submitted (30-MAY-2005) Human Genome Sequencing Center, Baylor
College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 30, 2005 this sequence version replaced gi:62122979.
Sequencing is completed to a minimum standard of double strand
coverage with a minimum of 2 clones and 2 reads with no ambiguities
or 2 chemistries with a minimum of 2 clones and 3 reads with no
ambiguities. If the sequence quality does not meet this standard,
it will be indicated in the annotation.
The repeat regions shown were identified using RepeatMasker by
Adrian Smit.
Sequence similarities were identified using PowerBlast by Jinghui
Zhang.
Exon/Intron boundaries of identified genes were chosen if there
were canonical splice junctions that maintained sequence continuity
across the splice junctions.

Center clone name: RP1-100J12, RP1-P79E4  
----- Consensus quality: 188276 bases at least Q40  
Consensus quality: 130662 bases at least Q30  
Consensus quality: 190837 bases at least Q20  
Quality coverage: 10.52x  
-----

This sequence was finished as follows unless otherwise noted: all  
regions were double stranded, sequenced with an alternate  
chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by at least

one plasmid subclone or more than one M13 subclone; and the  
assembly was confirmed by restriction digest.

-----  
Neighboring sequence information:

This clone is overlapped by RP5-866H8, RP1-84N21.
